

Cogito Platform Phase 0

Product Requirements Document

Prepared by Andreandhiki Riyanta Putra

Reviewed by Argya Vityasy

Date: August 22, 2026

TL;DR

Cogito should not launch Phase 0 as a simple marketing site. The first release should prove the core operating loop of the product: student signup, Marks purchase, tutor discovery, solo or group booking, tutor fulfillment, and admin intervention when something goes wrong.

This PRD is the source of truth for Phase 0 product scope, user-visible behavior, business rules, and acceptance criteria. Technical implementation choices are owned separately unless they change product behavior.

The recommended Phase 0 scope is:

- student / tutor / admin access,
- Marks wallet and ledger,
- payment integration,
- tutor self-pricing through IDR-denominated base honoraria and the client-defined Cogito take schedule,
- tutor listing and basic discovery,
- solo booking core,
- full group booking flow,
- booking change policy (cancel / reschedule, late-cancel override),
- notification system (in-app + critical email),
- automatic online meeting link creation once all booking approvals are complete,
- achievements dashboard CTA / submission flow,
- tutor-side operational tools,
- admin-side operational tools,
- practical integration to the existing Competition Calendar and balance-gated Knowledge Bank.

Document Information

Document Title	Cogito Platform Phase 0 — Product Requirements Document
Document Version	1.7
Document Status	Client-aligned revision
Creation Date	May 26, 2026
Authors	Andreandhiki Riyanta Putra
Reviewer	Argya Vityasy
Target Release	Phase 0

Version Control

Version	Date	Notes
0.1	May 26, 2026	Initial PRD draft for Cogito Phase 0.
0.2	May 27, 2026	Added booking change policy, dynamic group pricing, notifications, achievements, and TDD test cases.
0.3	May 27, 2026	Hardened for build handoff: booking state model, ledger rules, group pricing deadlines, notification matrix, achievements moderation, NFRs, and TDD checklist.
0.4	May 28, 2026	Added governance, decision log, open questions, product surfaces and permissions, data model overview, edge cases, and release governance.
0.5	May 29, 2026	Resolved merge state, aligned metadata, and tightened wording for client review.
0.6	May 29, 2026	Added group booking reconfirmation sequence, confirmed participant withdrawal handling, offline room approval rules, booking price display behavior, and tier pricing matrix.
0.7	May 29, 2026	Clarified Package 2 alignment, support button / Knowledge Bank access wording, and open questions with examples.
0.8	May 29, 2026	Added parent-legible copy wording and finalized the current scope clarifications.
0.9	May 30, 2026	Aligned with In-Platform Economics: Marks economics, tutor self-pricing, Resource Bank access gate, series booking rules, critical email triggers, rich-text session notes, proposed package table, purchase UI rules, economics glossary, and expanded group series test cases.
1.0	June 1, 2026	Incorporated client feedback: finalized Marks packages, 35-Mark Knowledge Bank access threshold, public and dashboard Competition Calendar access, fixed online/offline take schedules, registered-user group invitations, offline room flow simplification, and Google Meet dependency question.
1.1	June 3, 2026	Historical tutor self-pricing revision: baseline floors and the accumulated extra-take rule were defined here; these assumptions are superseded by the client-aligned IDR honorarium model in version 1.5.
1.2	June 3, 2026	Added invite-only tutor onboarding, account-claim flow, tutor profile statuses, and acceptance coverage for existing-user email matching.
1.3	June 3, 2026	Resolved OQ-04 (support SLA: 30 min business hours, 4 hours outside) and OQ-05 (Google Workspace Business Standard). Added OQ-06 (IDR refund policy for unused Marks), OQ-07 (tutor no-show and lateness policy), and OQ-08 (held Marks release timing on booking expiry).
1.4	June 3, 2026	Resolved client open questions: purchased Marks are non-convertible to rupiah, Google Meet attendee automation is desired but requires API feasibility confirmation, lateness tolerance is 15 minutes for

Document Governance

This PRD governs what the product must do and what users must be able to do in Phase 0.

- If a product rule, workflow, or acceptance criterion is not written here, it is unresolved and must not be assumed.
- Any scope, policy, pricing, or user-facing behavior change must be reflected in this document before implementation.
- Technical implementation details such as framework, hosting, database, auth provider, queueing, payment vendor, and email vendor are owned separately and must not be inferred from this PRD.
- Client-facing changes require explicit client approval before they are considered final.
- When the implementation and this PRD disagree, this PRD wins until it is updated through version control.

This PRD implements the selected Package 2 technical scope plus the approved notification and achievements additions. Strategic-doc items such as archetype routing, free diagnostic sessions, referral mechanics, premium Knowledge Bank gating, university profile builder, and other growth modules remain deferred unless separately approved. The client-provided “Marks Economy, Regulatory Compliance & Engineering Blueprint” dated August 15, 2026 supersedes the earlier Marks-denominated tutor pricing, Rp7,000-per-Mark tutor payout, and package assumptions in this PRD. The blueprint is treated as the source for the Phase 0 economic model, while this PRD remains the product source of truth for implementation behavior.

Commercial Notes

This document defines the agreed Phase 0 product scope and serves as the primary reference for project implementation.

- Any feature, workflow, integration, screen, report, automation, role, business rule, or user-facing behavior not explicitly documented in this PRD shall be considered out of scope unless mutually agreed upon through a documented change request.
- Acceptance criteria define the expected product behavior and outcomes, but do not prescribe a specific implementation approach, architecture, interface design, technical stack, or user interface unless explicitly stated.
- Third-party services and integrations may introduce implementation constraints outside the developer’s control. Adjustments resulting from vendor limitations, approval processes, API restrictions, account setup requirements, service availability, quota limitations, or pricing changes shall be discussed and mutually agreed upon before implementation.
- Acceptance of the delivered product shall be based on fulfillment of the documented requirements and acceptance criteria within this PRD.

Decision Log

ID	Date	Decision	Status
DL-01	May 28, 2026	Phase 0 is an operating platform, not a marketing site.	Final
DL-02	May 28, 2026	Parent account and dedicated parent dashboard are deferred from Phase 0.	Final

ID	Date	Decision	Status
DL-03	August 23, 2026	Competition Calendar and Knowledge Bank are delivered inside the authenticated app, while Sanity remains the editorial source of truth and the bilingual academy landing page remains the public CTA surface.	Final
DL-04	May 28, 2026	The Marks ledger is immutable and every balance change creates a new ledger entry.	Final
DL-05	May 28, 2026	In-app notifications are the source of record; email is reserved for critical events.	Final
DL-06	May 28, 2026	H-2 cancellation rules apply to student self-service changes and late-cancel handling.	Final
DL-07	May 28, 2026	Group bookings reprice against the final confirmed headcount and require reconfirmation when the price changes.	Final
DL-08	May 28, 2026	Admin emergency overrides are allowed only with an auditable trail.	Final
DL-09	May 28, 2026	Technical stack and vendor choices are intentionally excluded from this PRD.	Final
DL-10	May 29, 2026	Promotional or free Marks are not included in Phase 0.	Final
DL-11	May 29, 2026	Admin tooling includes tutor compensation visibility for payroll support.	Final
DL-12	May 29, 2026	Refunds are limited to actual payment errors and admin-approved corrections; normal pre-H-2 cancellations release held Marks, late cancellations and no-shows do not auto-refund, and manual corrections create compensating ledger entries.	Final
DL-13	May 29, 2026	Confirmed group participant withdrawal before H-2 triggers repricing and reconfirmation for remaining participants; after H-2 it follows late-cancel / no-show handling unless admin override is recorded.	Final
DL-14	May 29, 2026	Phase 0 follows Package 2 from the technical proposal plus approved notifications and achievements additions; archetypes, free diagnostic sessions, referral mechanics, and premium Knowledge Bank gating remain deferred unless separately approved.	Final
DL-15	August 15, 2026	Tutor tier-based pricing and Marks-denominated tutor self-pricing are removed from Phase 0. Tutors set an IDR base honorarium for each supported modality in Rp5,000 increments; group honoraria are derived from the fixed online/offline increment schedule.	Final
DL-16	June 1, 2026	Knowledge Bank access requires student login and at least 35 total Marks in the wallet; authenticated tutors and admins may access it without a Marks threshold. This is an eligibility threshold for students, not a 35-Mark fee.	Final
DL-17	May 30, 2026	Series bookings may contain up to 4 explicitly selected sessions, require tutor acceptance or decline as a full package, and hold Marks for all sessions upfront.	Final
DL-18	May 30, 2026	Phase 0 uses rich-text session notes only; structured post-session assessment is deferred.	Final
DL-19	June 1, 2026	Group class invitees must be registered Cogito users in Phase 0 and accept invitations in-platform. Inviting non-registered users by email or phone is deferred.	Final

ID	Date	Decision	Status
DL-20	June 1, 2026	Offline booking remains in Phase 0, simplified to student room preference, tutor acceptance, then admin room confirmation / relocation / cancellation.	Final
DL-21	June 1, 2026	All Phase 0 class sessions are 90 minutes and Marks do not expire.	Final
DL-22	August 15, 2026	The active online/offline schedules define the Cogito take in IDR. They are initialized from the client-approved defaults and may be changed by an admin for future bookings only; the tutor honorarium remains the tutor's IDR base rate plus the modality-specific per-student increment. Student-facing booking prices are derived by converting the total IDR to Marks at the Rp5,000 computational value and rounding up per student.	Final
DL-23	June 3, 2026	Tutor access is invite-only. Public signup cannot self-select tutor access. Admin invites tutors by email; accepting the invite either creates a new account or attaches tutor access to an existing user with the same verified email. Tutor profiles remain unpublished until onboarding is complete and admin approval is recorded.	Final
DL-24	June 3, 2026	Purchased Marks cannot be converted back to rupiah. Marks stay in the wallet unless spent on bookings or corrected by admin for actual payment / platform errors.	Final
DL-25	June 3, 2026	Booking confirmation, participant confirmation, reconfirmation, tutor response, and room approval windows are 12 hours unless the session starts sooner. Expired or failed scheduling holds must be released back to available Marks within 12 hours after failure.	Final
DL-26	June 3, 2026	Lateness tolerance is 15 minutes for both tutors and students. Tutor absence beyond 15 minutes cancels the meeting and returns held Marks to affected students. Students can report tutor lateness / no-show from the booking detail page.	Final
DL-27	August 15, 2026	Marks are closed-loop prepaid learning credits. The computational value is Rp5,000 per Mark; approved package prices range from Rp6,250 per Mark down to Rp5,000 per Mark, with the package premium retained by Cogito as platform spread.	Final
DL-28	August 15, 2026	Tutors do not hold, withdraw, or convert Marks. Tutor compensation is an IDR honorarium paid from Cogito's operating account through the approved payroll / disbursement process.	Final
DL-29	August 22, 2026	Admin may edit the active Cogito take schedule in Rp5,000 increments with optimistic version control. The change is audited and applies only when a new booking or repricing snapshot is created; a booking's persisted snapshot is immutable for ordinary rate changes.	Final

Open Questions

- **OQ-01: Resolved.** The client-approved package structure is Starter 50 Marks / Rp312,500, Learner 120 Marks / Rp690,000, Explorer 200 Marks / Rp1,070,000, and Pioneer 400 Marks / Rp2,000,000. These values supersede all earlier package drafts.
- **OQ-02: Resolved.** All Phase 0 class sessions are 90 minutes.
- **OQ-03: Resolved.** Marks do not expire in Phase 0.

- **OQ-04: Resolved.** Emergency override cases are defined in the Emergency Override Rules section. Default support response time for booking exceptions and emergency overrides is 30 minutes during business hours (Monday–Saturday, 09:00–21:00 WIB) and 4 hours outside business hours. The admin dashboard must display a queue sorted by urgency (time-to-session, booking state, Marks at stake). Auto-acknowledge must be sent immediately on request. If no admin action is taken within the SLA window, the request must escalate via WhatsApp to Cogito Academy’s support number: +62 881-0119-90195. This SLA is measured and reported in the admin dashboard.
- **OQ-05: Resolved with implementation dependency.** Cogito already has a Google account for Google Meet usage. The desired product behavior is automatic Google Calendar / Google Meet event creation using a Cogito-controlled Google account, with tutor and confirmed student emails added as event attendees. This is considered feasible in concept, but final implementation must validate Google Calendar API capability, authorization method, quota / cost implications, and any account setup requirements before launch. If setup requires client action, the developer and client should hold a setup meeting to connect the Google account securely and confirm the API configuration. The fallback state “meeting link pending” remains required for graceful degradation.
- **OQ-06: Resolved.** Purchased Marks are non-refundable, non-transferable, and cannot be converted to rupiah after a valid purchase. Unused Marks remain in the student’s wallet because Marks do not expire. Payment-error corrections remain possible when cash was captured incorrectly.
- **OQ-07: Resolved.** Lateness is tolerated up to 15 minutes for both tutors and students. If the tutor does not arrive within 15 minutes after scheduled start, the meeting is considered cancelled and affected students’ held Marks are returned. Students must have a booking-detail report button for tutor lateness / no-show. Student lateness beyond 15 minutes may be marked late / no-show under the normal late-cancel / no-show policy unless admin override applies.
- **OQ-08: Resolved.** Booking response windows are 12 hours per step unless the session starts sooner. This applies to tutor response, participant confirmation, repricing / reconfirmation, and offline room approval. When scheduling fails or a booking expires, held Marks must be released back to available balance within 12 hours after the failure / expiry event.
- **OQ-09: Resolved.** The client-provided Marks Economy, Regulatory Compliance & Engineering Blueprint dated August 15, 2026 is the approved economic reference for Phase 0. Its regulatory interpretation must still be validated with qualified Indonesian legal and financial counsel before production launch.

Product Understanding

Cogito is intended to function as a practical operating platform for competition coaching, not just a public-facing website. The product needs to support commercial transactions, booking operations, tutor fulfillment, and administrative oversight in one coherent flow.

The main risk in Phase 0 is overbuilding. If the first release expands into growth tooling, advanced analytics, rich assessments, and long-term ecosystem features too early, the product becomes harder to ship, harder to stabilize, and harder to validate commercially.

Product Goal

The goal of Phase 0 is to deliver one complete, reliable loop:

1. user signs up,

2. user purchases Marks,
3. user browses tutors and offerings,
4. user books a solo or group session,
5. tutor accepts or declines,
6. session is completed,
7. Marks / hold / release / refund logic are handled correctly,
8. admin can monitor and intervene when necessary.

Scope

Included in Phase 0

- student, tutor, and admin authentication,
- basic student profile,
- optional parent contact information in the student profile,
- Marks balance display,
- package purchase flow,
- payment integration,
- transaction history / ledger,
- hold / release / refund logic,
- invite-only tutor onboarding and admin approval,
- tutor self-pricing through IDR-denominated base honoraria and increment validation,
- tutor honorarium breakdown and payout-request / payroll-support visibility,
- tutor list, summary profile, credentials summary, expertise, computed Marks price per student, and availability visibility,
- solo booking lifecycle,
- full group booking lifecycle,
- booking change policy (cancel / reschedule, late-cancel override),
- notification system (in-app + critical email),
- achievements dashboard CTA / submission flow,
- tutor availability and incoming booking tools,
- admin monitoring, override, and reconciliation tools,
- authenticated Competition Calendar and Knowledge Bank app surfaces backed by the existing Sanity content,
- support button to Cogito Academy WhatsApp (+62 881-0119-90195).

Non-Goals / Deferred from Phase 0

- dedicated parent account and parent dashboard,
- archetype-based personalization,
- full 7-point assessment engine,
- rich progress reporting and advanced analytics,
- referral system and watchlists,
- free diagnostic sessions,
- a separate public Knowledge Bank page outside the authenticated app,
- inviting non-registered users into group classes,
- AI-based long-term ecosystem modules,

- subscription billing or recurring membership plans,
- automated external bank or disbursement-provider payout integration unless separately approved,
- a second editorial database for Competition Calendar or Knowledge Bank content,
- mobile app delivery for Phase 0.

Primary Users and Roles

Student

The student is the main booking and payment user. The student purchases Marks, discovers tutors, books sessions, and tracks booking history and balance.

Tutor

The tutor is an invite-only supply-side user. A public user cannot self-select the tutor role during signup. A tutor receives incoming bookings, manages availability, accepts or declines sessions, sets an IDR base honorarium for each supported modality in Rp5,000 increments, reviews the derived honorarium for class sizes 1–6, and marks sessions complete after the tutor profile is approved and published.

Admin

The admin monitors bookings, wallet activity, tutor pricing compliance, the active Cogito take schedule, and exceptions. The admin can update the active Cogito take schedule for future bookings, with optimistic version control and an audit trail, and performs corrections when needed.

Parent Contact

A parent may be stored as contact information on the student profile, but Phase 0 does not require a dedicated parent account. Wallet, booking, and refund copy should remain parent-legible even without a dedicated parent dashboard.

Product Surfaces and Permissions

Screen Inventory

Surface	Required screens / behavior
Public	Existing bilingual public landing page remains in place; approved achievements may be surfaced there. Calendar and Knowledge Bank CTAs send visitors to app login with an internal return path; the content itself is authenticated.
Student	Login / signup, dashboard, wallet and Marks purchase, tutor discovery, tutor profile, solo and group booking flow, booking detail / history, report tutor lateness / no-show action, notifications, achievements submission, authenticated Competition Calendar, 35-Mark-gated Knowledge Bank, and WhatsApp support button. Public signup creates student / default access only and cannot create tutor access.
Tutor	Invite acceptance, account claim, onboarding, dashboard, IDR honorarium setup and breakdown, payout request / payroll status, availability management, incoming bookings, booking detail, reschedule proposal, session completion, session notes, and authenticated Knowledge Bank access without a Marks threshold.
Admin	Login, dashboard, user lookup, tutor invitation, tutor onboarding review, booking monitor, booking detail and state history, wallet / ledger view, override / reconciliation, tutor honorarium review, economy settings, achievement moderation, audit review, and authenticated Knowledge Bank access without a Marks threshold.

Permissions Matrix

Action	Student	Tutor	Admin	Notes
View own dashboard / profile / wallet	Yes	Yes	Yes	Admin access is for oversight and support.
Edit own profile	Yes	Yes	Yes	Admin edits are via admin tools.
Purchase Marks	Yes	No	No	Only student accounts top up the wallet.
Create solo or group booking	Yes	No	No	Student initiates booking.
Cancel / reschedule own booking before H-2	Yes	No	No	Late self-service changes are blocked.
Accept / decline assigned booking	No	Yes	No	Tutor owns the booking decision.
Propose reschedule	No	Yes	No	Student approval is required before the change lands.
Manage availability	No	Yes	No	Tutor controls own availability.
Complete session and add notes	No	Yes	No	Completion is tutor-driven.
View all bookings and ledger entries	No	No	Yes	Admin uses this for monitoring and support.
Set own tutor base honorarium	No	Yes	Yes	Tutors set IDR base honoraria for supported modalities in Rp5,000 increments, with a minimum of Rp50,000; admin can review or correct exceptions.
Manage active Cogito take schedule	No	No	Yes	Admin edits online/offline base take and per-student increments in Rp5,000 increments; changes are audited and affect future booking snapshots only.
Invite tutor by email	No	No	Yes	Admin sends tutor invites; public users cannot request or self-assign tutor access.
Accept tutor invite	No	Yes	No	Invite acceptance requires email ownership and either creates a new user account or attaches tutor access to an existing matching account.
Publish tutor profile	No	No	Yes	Tutor profile remains hidden from

Core Product Flow

1. Student signs up or logs in.
2. Student purchases Marks through the payment flow.
3. Student browses tutor profiles, pricing, and availability.
4. Student books either a solo session or a group session.
5. Tutor receives the request and accepts or declines it.
6. If accepted, the session proceeds to completion.
7. Marks are held, released, or deducted according to the booking outcome.
8. Admin reviews the operational state and intervenes only when exceptions occur.

Functional Requirements

Req ID	User Story	Requirement / Acceptance Criteria
FR-01	As a student, tutor, or admin, I want role-specific access so I only see the tools relevant to me.	Requirement: The system shall support student, tutor, and admin authentication. Acceptance: Each role lands on its own permitted workspace after login, and unauthorized access to other role surfaces is blocked.
FR-02	As a student, I want my profile and parent contact data stored safely so the platform can support real-world usage.	Requirement: The system shall store a basic student profile and optional parent contact information. Acceptance: Student profile fields can be created and edited, and parent contact fields may remain blank without breaking the account.
FR-03	As a student, I want to see my Marks balance and transaction history so I can trust the wallet.	Requirement: The system shall display total Marks balance, held Marks, available Marks, and maintain an immutable ledger. Acceptance: Every purchase, deduction, hold, release, and refund creates a ledger entry with timestamp, reference, amount, and resulting balances. Available balance is total balance minus held Marks.
FR-04	As a student, I want to buy Marks through a payment provider so I can fund bookings.	Requirement: The system shall support Marks purchase through an external payment integration and the client-approved package pricing. Acceptance: Successful payment increases balance and records a receipt; failed or pending payments do not credit Marks. The package cards show Starter Pack (50 Marks / Rp312,500), Learner Pack (120 Marks / Rp690,000), Explorer Pack (200 Marks / Rp1,070,000), and Pioneer Pack (400 Marks / Rp2,000,000).
FR-05	As an admin, I want tutor honoraria and Cogito fees to follow the approved economic model.	Requirement: The system shall validate tutor base honoraria in IDR and calculate class costs from the active admin-managed modality schedules. Acceptance: Admin can review tutor base honoraria; each supported modality accepts values no lower than Rp50,000 and only in Rp5,000 increments; online honorarium increases by Rp30,000 per additional student, offline honorarium increases by Rp40,000, online Cogito take is Rp50,000 plus Rp20,000 per additional student, and offline Cogito take is Rp90,000 plus Rp40,000 per additional student.

Req ID	User Story	Requirement / Acceptance Criteria
FR-06	As a student, I want enough tutor information to make a booking decision.	Requirement: The system shall provide a tutor list with summary profile, credentials summary, expertise, computed Marks price per student for supported class sizes and modalities, and availability. Acceptance: The listing is usable without requiring a separate content system for these core booking details. Student-facing cards and profiles show the final Marks per student and class-size indicator; tutor IDR honorarium inputs are not presented as a student cash-out or Marks-conversion rate. Every confirmed booking stores an economic snapshot so future tutor rate changes do not affect existing bookings.
FR-07	As a student, I want to book a solo session so I can get help directly from a tutor.	Requirement: The system shall support tutor selection, slot selection, booking confirmation, and lifecycle tracking for solo bookings. Acceptance: Solo bookings move through the expected states (created, accepted / declined, completed, cancelled) and remain visible in booking history.
FR-08	As a student, I want to book a group session so multiple participants can join the same slot.	Requirement: The system shall support proposer flow, invitee flow, target group size, invitation window, repricing, and final confirmation. Acceptance: Group bookings only finalize when the required confirmation rules are satisfied, and the proposer can see the repricing outcome and next action. One-off group sessions may allow pre-H-2 withdrawal with repricing; group series follow the no opt-out policy in the series rules.
FR-09	As a tutor, I want lightweight operational tools so I can fulfill bookings efficiently.	Requirement: The system shall provide tutor-side tools for availability, incoming bookings, accept / decline, reschedule proposals, completion, and rich-text session notes. Acceptance: Tutors can execute each action from their workspace and the changes persist on the booking record, including tutor-initiated schedule changes. Session notes support sanitized rich text such as paragraphs, headings, bullet lists, numbered lists, links, and emphasis; structured assessment fields are deferred from Phase 0.
FR-10	As an admin, I want monitoring and override tools so exceptions do not block operations.	Requirement: The system shall provide admin visibility into bookings, wallet states, emergency overrides, and reconciliation actions. Acceptance: Admin can inspect booking and ledger records, apply corrections or emergency overrides only for defined emergency cases, retain an auditable change trail, and see exception reports sorted by urgency. Every emergency override must record reason, actor, affected Marks, and user-visible outcome.
FR-11	As a user, I want access to Competition Calendar after signing in.	Requirement: The system shall expose the published Competition Calendar inside the authenticated app for every signed-in role while keeping Sanity as the editorial source of truth. The bilingual public academy site shall provide login CTAs with a calendar return path. Acceptance: A signed-in user can browse the English app calendar without a Marks condition; public academy calendar URLs redirect to app login; the existing Sanity content remains authoritative.

Req ID	User Story	Requirement / Acceptance Criteria
FR-12	As a student, I want clear Knowledge Bank access rules so I know when content is available.	Requirement: The system shall provide the Knowledge Bank inside the authenticated app, backed by the existing Sanity source, and gate student access by login plus wallet threshold while allowing authenticated tutors and admins to access the same resources without that student threshold. Acceptance: Student access is available only after signing into the student dashboard and only if the student's wallet has at least 35 total Marks; tutor and admin access is available after authentication regardless of wallet balance. The UI must state clearly that 35 Marks is a minimum student wallet-balance requirement, not a 35-Mark access fee, opening the Knowledge Bank must not deduct Marks, and resource files must be served only through an authenticated app path.
FR-13	As support staff, I want the system to preserve history so disputes can be reviewed later.	Requirement: The system shall preserve booking and wallet history for support and dispute handling. Acceptance: Historical booking and ledger records remain queryable and linked to the relevant student, tutor, and payment references.
FR-14	As a student, I want a clear cancel / reschedule policy so I know when a booking can still change without penalty.	Requirement: The system shall allow student-initiated cancel or reschedule before the H-2 cutoff for eligible one-off bookings, block self-service changes after H-2, and treat late cancel / no-show as a penalty case unless an admin-only emergency override is applied. Acceptance: Before H-2, eligible one-off sessions can be cancelled or rescheduled without penalty; after H-2, self-service changes are blocked, a late-cancel / no-show path deducts Marks, and any emergency override is recorded with an audit trail. Lateness tolerance is 15 minutes for both students and tutors. If the tutor does not arrive within 15 minutes after scheduled start, the meeting is considered cancelled and affected students' held Marks are returned. Series-specific cancellation rules override this generic rule where stated.
FR-15	As a tutor, I want to propose a new slot instead of moving the booking silently so the student can approve the change.	Requirement: The system shall support tutor-initiated reschedule proposals as a separate approval flow. Acceptance: The student must approve the proposed new slot before the booking is updated, no student penalty is applied for a tutor-initiated reschedule, and the change is visible in booking history and notifications.
FR-16	As a student, I want group bookings to adapt fairly when not everyone confirms.	Requirement: The system shall support a group-booking deadline, repricing to the confirmed headcount, and a reconfirmation loop for all remaining participants. Acceptance: Each confirmation or reconfirmation step has a 12-hour response window unless the session starts sooner. If a 5-person booking reaches the deadline with 3 approvals, the system recalculates the Marks price for 3 participants, asks all remaining participants to reconfirm the final price, and only finalizes the booking once the final confirmed headcount accepts the repriced total; if the confirmed headcount changes during reconfirmation, the system recalculates the price again before activation. Expired or failed scheduling holds are released within 12 hours after failure / expiry.

Req ID	User Story	Requirement / Acceptance Criteria
FR-17	As a user, I want important changes to reach me in-app and by email when needed.	Requirement: The system shall write every notification to the in-app notification page and send email only for critical booking, payment, refund, and schedule-change events. Acceptance: All events remain visible in-app, schedule changes always send email, and non-critical updates stay in-app only so email volume remains controlled.
FR-18	As a student, I want to submit achievements from my dashboard so I can showcase them publicly.	Requirement: The system shall provide an Achievements dashboard page with a submission CTA, review status, and moderation flow. Acceptance: The dashboard shows a CTA such as <i>Submit your achievements to show them off on Cogito Academy</i>, students can submit achievement items, admins can approve or reject them, and approved entries may be surfaced on Cogito's existing public landing page.
FR-19	As a tutor, I want to set my own IDR honorarium so I can price my time appropriately.	Requirement: The system shall let each tutor set an IDR-denominated one-student base honorarium for each supported modality. Acceptance: Base honoraria are stored in IDR, use Rp5,000 increments, have a minimum of Rp50,000, and generate the exact honorarium for class sizes 1–6 using the approved online / offline increment schedule. Tutors see the resulting IDR honorarium breakdown and may request payout in IDR; tutors do not receive, hold, or cash out Marks. Rate changes apply only to future bookings, and confirmed bookings retain their stored economic snapshot.
FR-20	As a student, I want to book a short series of sessions in one flow.	Requirement: The system shall support series bookings of up to 4 explicitly selected sessions with the same tutor, session type, and group composition. Acceptance: The booking form lists all selected dates and times, holds Marks for all sessions upfront, and sends the full series to the tutor for accept / decline as one package. Partial tutor acceptance is not allowed.
FR-21	As a student, I want online sessions to include a meeting link after all parties confirm.	Requirement: The system shall create a 90-minute online meeting link after participant confirmation and tutor acceptance are complete. Acceptance: Online bookings do not expose a meeting link while still awaiting invitee, tutor, or repricing confirmation. Target behavior is creating a Google Calendar / Google Meet event using Cogito-controlled Google account infrastructure, automatically inviting the tutor email and confirmed student emails from the booking, storing the provider event id and meeting URL on the booking, and including the link in critical notifications. Final implementation must validate Google Calendar API capability, authorization setup, and cost / quota implications. If automatic Google Meet event creation is not ready at launch or fails at runtime, the fallback is a tutor/admin-visible "meeting link pending" state with manual-link entry. The assigned tutor or an admin may paste any valid meeting URL as fallback.

Req ID	User Story	Requirement / Acceptance Criteria
FR-22	As an admin, I want offline booking room approval to be simple enough to operate in v1.	Requirement: The system shall support room selection / preference during offline booking and an admin room approval step after tutor acceptance. Acceptance: The student sees available rooms as selectable and unavailable rooms as disabled where room availability data exists. After tutor acceptance, admin can confirm the selected room, relocate the booking to another room, or cancel only if no room is available. Tutor and students are notified of relocation or cancellation.
FR-23	As an admin, I want tutor access to be invite-only so Cogito controls tutor quality and prevents unauthorized tutor signup.	Requirement: The system shall support admin-created tutor invitations by email. Public signup must not expose a tutor role option. Admin shall be able to invite a new tutor by email, resend or revoke pending invites, and view invite status. Acceptance: A tutor invite can be created only by admin. If the invited email does not belong to an existing user, accepting the invite creates the user account and a linked tutor onboarding record. If the invited email already belongs to an existing user, accepting the invite attaches tutor access to that existing user after login / email ownership verification. Admin does not manually create or know tutor passwords. Expired or revoked invites cannot create or attach tutor access, and every invite creation, acceptance, revocation, and role attachment is auditable.
FR-24	As a tutor, I want a clear onboarding path before I become visible to students.	Requirement: The system shall keep tutor profiles unpublished until onboarding is complete and admin approval is recorded. Acceptance: After invite acceptance, the tutor enters onboarding and must provide required profile data: display name, short bio, credentials summary, expertise / competition tracks, availability, supported modality, and an IDR base honorarium for each supported modality in Rp5,000 increments and at least Rp50,000. The UI shows the derived honorarium for class sizes 1–6. Optional proof files or links may be captured for admin review. The tutor can save incomplete onboarding as draft but cannot receive bookings or appear in student discovery until admin publishes the profile. Admin can approve, request changes, unpublish, or suspend a tutor profile with an audit reason.

FR-05 clarification. The schedules named in FR-05 are active configuration values, not compile-time constants. Admin may update the four Cogito take fields from the Economy Settings screen; changes are validated, versioned, audited, and used only for future booking or repricing snapshots.

Data Model Overview

The data model is product-facing and names the records the implementation must preserve.

- **User:** identity, role, status, and auth reference.
- **StudentProfile:** student details plus optional parent contact information.
- **TutorInvite:** admin-created invitation containing invited email, invite status, token reference, expiry, invited by, accepted by, revoked by, and audit timestamps.
- **TutorProfile:** tutor bio, expertise, IDR base honoraria by supported modality, derived honorarium display, availability summary, onboarding status, publication status, and admin review

metadata.

- **EconomyConfig**: the active Marks computational value, minimum tutor base honorarium, tutor increments, online/offline Cogito take bases and increments, optimistic version, last updater, and update timestamps.
- **Wallet**: total balance, held balance, available balance, and owner reference.
- **LedgerEntry**: immutable Marks movement record.
- **Booking**: booking type, current state, state history, timing, and pricing references.
- **BookingParticipant**: per-participant confirmation, reconfirmation, and attendance state.
- **Room**: offline classroom, capacity, location, and active / inactive status.
- **MeetingEvent**: online meeting provider, external event id, meeting URL, attendee emails, creation status, and external calendar event status.
- **AvailabilitySlot**: tutor availability window.
- **PaymentRecord**: external payment attempt, provider reference, and receipt reference.
- **RefundRecord**: compensating refund action linked to payment or booking state.
- **Notification**: durable in-app notification and delivery metadata.
- **Achievement**: submission payload, proof reference, and moderation status.
- **AuditLog**: immutable record of admin and operational changes.

Tutor Invitation and Onboarding Flow

Tutor access is not self-service. Phase 0 uses an admin-invited tutor flow so Cogito controls tutor quality, prevents unauthorized tutor accounts, and keeps tutor credentials reviewable before students can book.

Core policy

- Public signup creates student / default access only. The signup screen must not include an “I am a tutor” option.
- Admin does not manually create tutor passwords and must not need to know or reset a tutor’s password during onboarding.
- Tutor access starts from an admin-created invite sent to a specific email address.
- A tutor profile remains hidden from student discovery until onboarding is complete and admin explicitly publishes it.
- A tutor cannot receive booking requests until the tutor profile is published.

Invite lifecycle states

- **invited**: admin created the invite and the invite is waiting for acceptance.
- **accepted**: invite was accepted by a user who proved ownership of the invited email.
- **expired**: invite passed its expiry time before acceptance.
- **revoked**: admin revoked the invite before acceptance.

Tutor profile lifecycle states

- **draft**: tutor access exists but required onboarding fields are incomplete.
- **pending_review**: tutor submitted onboarding data and waits for admin review.
- **changes_requested**: admin requested corrections before approval.
- **approved_unpublished**: admin approved the tutor but profile is not yet visible to students.
- **published**: tutor is visible in discovery and can receive booking requests.
- **suspended**: tutor is hidden and cannot receive new booking requests.

New tutor account flow

1. Admin opens the tutor invitation tool and enters at minimum tutor email and display name. Optional internal notes may be recorded for later review.
2. The system creates a TutorInvite with status `invited`, expiry timestamp, inviter admin id, and single-use invite token reference.
3. The system sends an invite email containing the claim link. The link must not expose raw sensitive user data.
4. The invited tutor opens the link. If no user exists for that email, the tutor creates an account by setting credentials or using an approved login provider.
5. After email ownership is verified, the system creates a User and linked TutorProfile in `draft` status, marks the invite accepted, and records an audit entry.
6. Tutor completes onboarding fields and submits for review.
7. Admin reviews the submission and either requests changes, approves without publishing, or publishes the tutor.

Existing user email-match flow

1. Admin invites an email that already belongs to an existing user account.
2. The invite is still sent to that email address; the existing user must open the invite and authenticate as that user.
3. After email ownership and login are confirmed, the system attaches tutor access to the existing user rather than creating a duplicate account.
4. The system creates or reactivates the linked TutorProfile in `draft` status and records the invite acceptance and role attachment in the audit log.
5. If the logged-in account email does not match the invited email, the invite must not be accepted for that account.

Required tutor onboarding fields

- display name,
- short bio,
- credentials summary,
- expertise / competition tracks,
- availability,
- supported modality: online, offline, or both,
- IDR base honorarium for each supported modality, validated for the Rp50,000 minimum and Rp5,000 increments,
- derived honorarium breakdown for class sizes 1–6,
- optional credential proof links or files for admin review.

Admin review rules

- Admin can view invite status, resend pending invites, revoke pending invites, and inspect accepted invite audit history.
- Admin can request tutor profile changes with a reason visible to the tutor.
- Admin can approve but keep a tutor unpublished if Cogito wants the tutor ready internally but not yet visible.
- Admin can publish, unpublish, or suspend a tutor profile with an audit reason.
- Only published tutor profiles appear in student discovery, tutor cards, and booking flows.

Booking State Model

The booking record shall have one canonical current state and a persistent state history.

Canonical states

- **draft**: booking draft exists locally and may still be edited.
- **awaiting_marks_hold**: the booking is on hold and the Marks hold is pending or being validated.
- **awaiting_tutor_review**: the booking request is waiting for tutor accept / decline.
- **awaiting_participant_confirmation**: group invitees are still confirming attendance before the deadline.
- **reschedule_proposed**: tutor proposed a new slot and the student must approve.
- **awaiting_reconfirmation**: pricing or schedule changed and the remaining participants must reconfirm.
- **awaiting_admin_room_approval**: offline booking was accepted by the tutor and is waiting for admin to assign or approve a room.
- **confirmed**: tutor accepted and the booking is valid.
- **scheduled**: booking has a locked time and is ready to run.
- **completed**: session finished successfully.
- **declined**: tutor rejected the booking.
- **cancelled**: booking was cancelled before H-2 or was voided by admin before start.
- **late_cancelled**: booking was cancelled after H-2 and the late-cancel rule applied.
- **no_show**: session start passed and attendance did not happen.
- **expired**: a deadline passed before the required confirmation was collected.

Allowed transitions

- **draft** -> **awaiting_marks_hold** -> **awaiting_tutor_review**.
- **awaiting_tutor_review** -> **declined** or **confirmed**.
- **awaiting_tutor_review** -> **reschedule_proposed** if the tutor wants to move the session instead of accepting it.
- **confirmed** -> **awaiting_admin_room_approval** for offline bookings that require room assignment before scheduling.
- **awaiting_admin_room_approval** -> **scheduled** when admin assigns or approves the room.
- **awaiting_admin_room_approval** -> **reschedule_proposed** if admin cannot secure the requested room or needs to propose a new slot / location.
- **awaiting_admin_room_approval** -> **cancelled** if no room or acceptable alternative is available before the operational cutoff.
- **awaiting_participant_confirmation** -> **awaiting_reconfirmation** when the deadline is reached and the confirmed headcount is below the target but still valid.
- **reschedule_proposed** -> **awaiting_reconfirmation** after the student accepts the new slot.
- **awaiting_reconfirmation** -> **confirmed** when all required participants accept the final price or new slot.
- **confirmed** or **scheduled** -> **cancelled** before H-2.
- **confirmed** or **scheduled** -> **late_cancelled** after H-2.
- **confirmed** or **scheduled** -> **no_show** if attendance is missing at session start.
- any **awaiting** state -> **expired** if the deadline passes without the required response.

- completed, declined, cancelled, late_cancelled, no_show, and expired are terminal unless an admin audit correction is recorded.

Required persisted fields

- booking id, booking type, tutor id, proposer id, participant ids.
- current state, previous state, state reason, state history.
- target group size, confirmed headcount, deadline at, scheduled start time, timezone.
- tutor base rate IDR, tutor honorarium IDR, Cogito take IDR, total IDR, total Marks, Marks per student, actual Marks pooled, original Marks amount, repriced Marks amount, hold amount, refunded amount.
- room id / room status for offline bookings and meeting event id / meeting URL for online bookings.
- cancellation reason, reschedule metadata, override metadata, notification flags.

Marks Ledger Rules

Marks are Cogito's internal platform currency. Marks are not transferable between accounts and have no value outside the platform. The Marks ledger is immutable. Every balance change must create a new ledger row; no row may be edited in place.

Purchase package UI

- Students buy Marks from a wallet top-up screen that displays approved package cards.
- Each package card must show Marks amount, IDR price, effective Rp/Mark rate, and any best-value label approved by Cogito.
- The purchase screen must not allow a custom Marks amount in Phase 0 unless package design is changed and approved.
- If a student starts a booking without enough available Marks, the booking flow may send the student to top up, then return them to the booking flow after successful payment.
- All four package values are approved for Phase 0 seed data: Starter 50 Marks / Rp312,500, Learner 120 Marks / Rp690,000, Explorer 200 Marks / Rp1,070,000, Pioneer 400 Marks / Rp2,000,000.

Approved package table

The following package table is the approved Phase 0 wallet top-up structure. Package prices are the amount charged to the student. The Rp5,000 computational value is used for booking economics; any package premium above that value is retained by Cogito as platform spread at purchase.

Package	Marks	Price / Mark	Total Price	Platform Spread
Starter Pack	50 Marks	Rp6,250	Rp312,500	Rp62,500 (20.0%)
Learner Pack	120 Marks	Rp5,750	Rp690,000	Rp90,000 (13.0%)
Explorer Pack	200 Marks	Rp5,350	Rp1,070,000	Rp70,000 (6.5%)
Pioneer Pack	400 Marks	Rp5,000	Rp2,000,000	Rp0 (volume base-line)

The package table above supersedes all earlier package values, including the previous 300-Mark Pioneer Pack and the previous Explorer Pack draft.

Approved economics constants

- Computational value: 1 Mark = Rp5,000 for class pricing, Cogito take calculations, and conversion calculations.
- Student acquisition rates vary by package size from Rp6,250 / Mark down to Rp5,000 / Mark.
- The difference between the package purchase price and the Marks' Rp5,000 computational value is platform spread retained by Cogito at purchase.
- Tutor compensation is not a Marks conversion. Tutors receive an IDR honorarium under a separate service / honorarium agreement and do not hold or cash out Marks.
- Cogito's session take is calculated in IDR from the modality schedule and is separate from the package spread.

Ledger rules

- The wallet keeps **total balance** and **held balance**; available balance is total minus held.
- Students purchase Marks in approved packages: Starter 50 Marks / Rp312,500, Learner 120 Marks / Rp690,000, Explorer 200 Marks / Rp1,070,000, Pioneer 400 Marks / Rp2,000,000.
- Purchased Marks are non-refundable, non-transferable, cannot be converted back to rupiah, and do not expire after a valid purchase. Unused purchased Marks remain in the student's wallet.
- Tutor honorarium is calculated and reported in IDR. Any payout request or disbursement uses the tutor's IDR honorarium balance, not a Marks cash-out rate.
- Knowledge Bank access checks wallet balance continuously for students and requires at least 35 Marks; authenticated tutors and admins are not subject to this threshold.
- Successful Marks purchase creates a credit entry.
- Booking hold creates a hold entry.
- Booking completion converts the held amount into a deduction entry.
- Student cancel before H-2 creates a release entry.
- Late cancel or no-show creates a deduction entry unless an admin override creates a compensating refund or release entry.
- Payment refund, emergency refund, or manual correction always creates a new compensating entry; the original entry remains intact. Cash refund entries are limited to actual payment errors or admin-approved corrections where cash was captured incorrectly.
- Expired or failed scheduling holds must be released back to available Marks within 12 hours after the failure or expiry event.
- All ledger writes are idempotent by external event id or internal operation id.

Required persisted fields

- entry id, booking id, event key, entry type, actor type, amount, before balance, after balance, reason, created at.
- source reference for payment provider, refund provider, or admin override.

Knowledge Bank access rule

- Students must be signed in and inside the student dashboard; tutors must be authenticated in the tutor workspace.
- Students require a minimum wallet balance of 35 Marks; tutors and admins have access without a wallet threshold.
- Opening the Knowledge Bank does not deduct Marks.

- User-facing copy must say: “Knowledge Bank access requires at least 35 Marks in your wallet. You are not paying 35 Marks to open it.”
- A student below 35 Marks loses Knowledge Bank access until they top up or admin correction restores balance; this restriction does not apply to tutors or admins.

Refund Policy

Refund handling in Phase 0 is limited to actual payment errors and admin-approved corrections. Purchased Marks are not redeemable or convertible back to rupiah after a successful valid purchase.

- A booking cancelled before H-2 does not create a cash refund; it only releases any held Marks back to the student’s available balance.
- A late cancel or no-show does not receive an automatic refund. The late-cancel policy applies unless an admin override is recorded.
- A failed or pending payment does not credit Marks, so there is nothing to refund.
- Unused purchased Marks remain in the wallet indefinitely and cannot be cashed out to rupiah.
- If cash was captured incorrectly, or an admin needs to correct a wallet or booking mistake, the system records a compensating ledger entry and, when applicable, a payment-provider refund reference.
- Payment-error cash refunds are corrections, not Marks cash-out. Admin must reconcile captured amount, Marks credited, Marks already spent, booking deductions, and remaining wallet balance before issuing any payment-provider refund.
- If a duplicate or incorrect payment produced Marks that were already spent on completed services, admin must not issue a full cash refund blindly. Admin must either refund only the unused excess, correct the wallet with compensating entries, or escalate to finance / product owner review.
- Every refund-related action must be idempotent and auditable.

Emergency Override Rules

Emergency overrides exist to correct exceptional booking or wallet outcomes without changing the standard policy for normal cancellations, lateness, or no-shows.

Allowed emergency override cases

- Tutor does not arrive within 15 minutes after scheduled start.
- Tutor cancels too late for the student to reasonably rebook.
- Verified illness, accident, family emergency, or force majeure affects a confirmed participant.
- Platform failure prevents a confirmed user from joining, receiving the meeting link, confirming, or paying correctly.
- Payment provider or wallet ledger error causes an incorrect charge, hold, deduction, release, or balance display.
- Offline room or operational failure prevents a confirmed class from taking place.
- Admin made a documented operational mistake that affected booking state, wallet state, room assignment, or meeting access.

Override handling rules

- Every override must capture actor, reason, affected booking, affected wallet entries, before / after state, and user-visible outcome.

- Overrides may release held Marks, add compensating Marks, reverse an incorrect deduction, cancel a booking, or move a booking state.
- Overrides must not silently delete ledger entries; corrections use compensating entries.
- Admin can choose whether an exceptional case returns Marks, keeps the penalty, or requires manual follow-up.
- Students can report tutor lateness / no-show from the booking detail page. The report creates an admin queue item linked to the booking and does not directly alter Marks until policy automation or admin action applies.

Admin override UI / UX requirements

- Admin dashboard must include an “Exceptions / Overrides” queue sorted by urgency, with filters for tutor no-show, student emergency, payment / wallet issue, platform error, offline room issue, and admin correction.
- Each queue item must show booking id, session time, current booking state, affected users, held / deducted Marks, reported reason, report source, time since report, and SLA status.
- Booking detail must include an admin-only “Apply override” action. The action opens a confirmation form; it must not be a one-click destructive action.
- Override form must require override category, reason, affected participant(s), Marks action, user-visible note, and internal admin note.
- Marks action options should include: no Marks change, release held Marks, add compensating Marks, reverse incorrect deduction, partial return, and manual finance follow-up.
- For payment / wallet overrides, the UI must show payment record, ledger entries, Marks credited, Marks spent, remaining balance, and any prior refund references before admin can submit.
- Admin must preview before / after booking state and before / after wallet balances before submitting the override.
- Submitted override writes audit log and sends affected users a clear in-app notification; email is sent only when the override changes booking status, wallet balance, payment/refund state, or schedule.
- Override history must remain visible on booking detail and wallet / ledger detail for future dispute review.

Override examples

- Tutor no-show: student reports no tutor after 15 minutes; admin verifies; booking is cancelled as tutor no-show; affected held Marks are released; tutor reliability is flagged for admin review.
- Medical emergency: student requests late-cancel waiver after H-2 with evidence; admin approves; late-cancel penalty is waived fully or partially; audit records reason and Marks outcome.
- Platform error: meeting link or notification failed; admin verifies logs; booking is rescheduled or affected Marks are returned without penalty.
- Offline room failure: admin cannot provide room for confirmed offline class; booking is cancelled or relocated; held Marks are released if class cannot proceed.
- Payment mismatch: payment succeeded but Marks did not credit; admin verifies payment gateway record and creates a compensating Marks credit.
- Duplicate charge with spent Marks: admin verifies whether extra Marks were credited and spent; admin refunds only valid unused excess or escalates instead of issuing a blind full cash refund.

Lateness and No-Show Policy

Lateness tolerance is 15 minutes for both tutors and students.

- If the tutor arrives within 15 minutes after scheduled start, the session may proceed and is not automatically cancelled.
- If the tutor does not arrive within 15 minutes after scheduled start, the session is considered tutor no-show / tutor late-cancelled. Affected students' held Marks are released back to available balance.
- Students must have a "Report tutor lateness / no-show" action on the booking detail page after the scheduled start time.
- If a student arrives more than 15 minutes late or does not attend, the standard late-cancel / no-show policy applies unless admin override is recorded.
- In group sessions, once the booking is confirmed, each participant's Marks commitment is individual and locked. If tutor is present and the class proceeds, one student's lateness or no-show does not cancel the class, does not trigger repricing, and does not change the price for other participants.
- A late / absent group participant forfeits only their own committed Marks for that session unless admin override is recorded. Other confirmed participants continue normally.
- Tutor no-show affects all confirmed participants because the class cannot proceed without tutor delivery.
- Tutor lateness and no-show events should be tracked and flagged for admin review / tutor reliability monitoring.
- Phase 0 does not automatically suspend tutors based on lateness or no-show count. Admin may manually unpublish or suspend a tutor if repeated reliability issues warrant action.

Session Pricing, Marks Conversion, and Group Deadline Rules

Session pricing is based on the final confirmed headcount, the tutor's IDR base honorarium, the session modality, and the active Cogito take schedule. The active schedule starts with the client-approved defaults and is admin-configurable for future bookings; Phase 0 does not use tier-based tutor pricing or a Marks-to-IDR tutor cash-out rate.

Tutor cards and tutor profiles show the final Marks per student before the student starts booking, together with a literal class-size indicator. The tutor-facing surfaces show the IDR base honorarium and derived honorarium breakdown. The final student payable amount is recalculated against confirmed headcount during confirmation or reconfirmation.

Core constraints

- Class size is capped at $N \in \{1, 2, 3, 4, 5, 6\}$.
- Tutors configure an IDR one-student base honorarium for each supported modality. The value must be at least Rp50,000 and must use Rp5,000 increments.
- Admin configures the active Cogito take schedule: online base Rp50,000 and increment Rp20,000; offline base Rp90,000 and increment Rp40,000 by default. Each editable value uses Rp5,000 increments; increments may be zero but may not be negative.
- When an admin changes any active Cogito take value, every current tutor account receives a durable in-app notification describing the new online/offline schedule. Re-saving identical values is a no-op and does not create a new version, audit event, or notification.
- The default one-student base honorarium is Rp175,000 for online classes and Rp225,000 for offline classes.

- Tutors may change their base honorarium without a ceiling; changing a rate affects future bookings only.
- Tutors receive an IDR honorarium from Cogito. Tutors do not receive, hold, withdraw, or convert Marks.

Tutor honorarium

Online: $\text{tutorHonorariumIDR}(N) = \text{baseRateIDR} + (N - 1) * 30,000$

Offline: $\text{tutorHonorariumIDR}(N) = \text{baseRateIDR} + (N - 1) * 40,000$

Cogito take

Online: $\text{cogitoTakeIDR}(N) = \text{activeOnlineBase} + (N - 1) * \text{activeOnlineIncrement}$

Offline: $\text{cogitoTakeIDR}(N) = \text{activeOfflineBase} + (N - 1) * \text{activeOfflineIncrement}$

Student Marks calculation

Total IDR = tutor honorarium + Cogito take

Total Marks = Total IDR / 5,000

Marks per student = $\text{ceiling}(\text{Total Marks} / N)$

Actual Marks pooled = Marks per student * N

The IDR total is calculated before student billing. Students see only the final Marks per student and a clear class-size indicator. The actual Marks held or deducted for a group is the rounded-up per-student amount multiplied by the confirmed headcount. Any rounding difference is platform spread and does not increase the tutor's IDR honorarium.

Default online class economics

Students	Tutor honorarium	Cogito take	Total IDR	Total Marks	Marks / student	Actual Marks pooled
1	Rp175,000	Rp50,000	Rp225,000	45	45	45
2	Rp205,000	Rp70,000	Rp275,000	55	28	56
3	Rp235,000	Rp90,000	Rp325,000	65	22	66
4	Rp265,000	Rp110,000	Rp375,000	75	19	76
5	Rp295,000	Rp130,000	Rp425,000	85	17	85
6	Rp325,000	Rp150,000	Rp475,000	95	16	96

Default offline class economics at Cogito campus

Students	Tutor honorarium	Cogito take	Total IDR	Total Marks	Marks / student	Actual Marks pooled
1	Rp225,000	Rp90,000	Rp315,000	63	63	63
2	Rp265,000	Rp130,000	Rp395,000	79	40	80
3	Rp305,000	Rp170,000	Rp475,000	95	32	96
4	Rp345,000	Rp210,000	Rp555,000	111	28	112
5	Rp385,000	Rp250,000	Rp635,000	127	26	130
6	Rp425,000	Rp290,000	Rp715,000	143	24	144

The tables above show the default economics for reference. A tutor's selected base honorarium is substituted into the same formulas for the supported modality and confirmed headcount. The resulting IDR amounts are snapshot on the booking before Marks are held.

Price-point examples

- Extreme low end, junior online tutor at a Rp75,000 base rate: 1 student produces Rp125,000 total or 25 Marks; 4 students produce Rp275,000 total or 55 Marks, which bills as 14 Marks per student.
- Extreme high end, specialist offline masterclass at a Rp500,000 base rate: 1 student produces Rp590,000 total or 118 Marks; 6 students produce Rp990,000 total or 198 Marks, which bills as 33 Marks per student.

- Cogito's base operational margin remains protected regardless of the tutor's base rate.

Class-size labels should be literal, e.g. "class for 1", "class for 2", through "class for 6"; Phase 0 must not use solo / duo / trio naming in student-facing class-size labels.

Rules

- Each group booking stores target group size, minimum confirmed headcount, deadline at, provisional and final IDR totals, provisional and final Marks per student, actual Marks pooled, and the economic snapshot used for the booking.
- Default response window for each booking step is 12 hours unless the session starts sooner or admin records a shorter operational cutoff.
- The 12-hour window applies to tutor response, participant confirmation, repricing / reconfirmation, and offline room approval.
- Before the deadline, invitees can accept or decline, but the provisional total stays based on the target group size.
- At the deadline, the system computes confirmed headcount.
- Final tutor honorarium IDR = base rate IDR + modality increment $\times$ (confirmed headcount - 1).
- Final Cogito take IDR = the active modality take schedule for the confirmed headcount at the time the snapshot is created.
- Final total IDR = tutor honorarium IDR + Cogito take IDR.
- Final total Marks = final total IDR / Rp5,000; Marks per student = $\lceil$ final total Marks / confirmed headcount $\rceil$; actual Marks pooled = Marks per student $\times$ confirmed headcount.
- If confirmed headcount is below 2, the booking expires and all held Marks are released back to available balance within 12 hours after expiry.
- If confirmed headcount is 2 or more but below target, the system enters awaiting_reconfirmation and sends the final Marks per student and class-size price to all remaining participants.
- Every remaining participant, including the proposer if they are part of the group, must reconfirm the recalculated Marks per student.
- An admin schedule update never mutates an existing booking's persisted economic snapshot; repricing creates a new snapshot using the active version.
- If any confirmation changes the headcount again, the system recalculates and reissues the reconfirmation request.
- If reconfirmation deadline passes without all required approvals, the booking expires and the held amount is released within 12 hours after expiry.
- Tutor-initiated time changes also force awaiting_reconfirmation if the confirmed participants are affected.
- If a confirmed group participant withdraws before H-2, the system releases that participant's held Marks, recalculates the tutor honorarium IDR, Cogito take IDR, final Marks per student, and actual Marks pooled for the remaining confirmed headcount, and moves the booking to awaiting_reconfirmation.
- Remaining participants must accept the updated price before the reconfirmation deadline. If all remaining participants accept and the headcount remains valid, the booking continues; otherwise, the booking expires and held Marks are released within 12 hours after expiry.
- If a confirmed group participant withdraws after H-2, the withdrawal is treated as a late cancel or no-show and does not trigger automatic repricing or refund unless an admin override is recorded.
- Online group bookings may proceed to scheduled after tutor acceptance and required partici-

pant confirmation.

- Offline group bookings must enter `awaiting_admin_room_approval` after tutor acceptance and may not become scheduled until admin confirms or relocates the room.
- If admin cannot secure a room for an offline booking within the 12-hour room approval window, admin may relocate to another room or cancel the booking with held Marks released according to the cancellation state.

Group booking sequence

1. The proposer creates a group booking by selecting tutor, session type, target group size, slot, modality, and room preference if modality is offline.
2. The system validates available Marks and places a provisional hold where required.
3. Invitees are selected from registered Cogito users and receive the booking invitation in-platform and by email. Non-registered invitees are not supported in Phase 0.
4. When the invitation deadline is reached, the system computes confirmed headcount.
5. If confirmed headcount is below the minimum, the booking expires and all held Marks are released within 12 hours after expiry.
6. If confirmed headcount is valid but below the target group size, the system recalculates the final total and moves the booking to `awaiting_reconfirmation`.
7. Each remaining participant must explicitly accept the updated price. The booking does not continue silently after a price increase.
8. If all remaining participants accept the updated price before the reconfirmation deadline, the booking proceeds to tutor review.
9. If any participant rejects or does not respond before the reconfirmation deadline, the system recalculates again if the remaining headcount is still valid; otherwise, the booking expires and held Marks are released within 12 hours after expiry.
10. After tutor acceptance, online bookings may proceed directly to scheduled, while offline bookings enter `awaiting_admin_room_approval`.
11. For offline bookings, admin confirms the selected room, relocates to another room, or cancels only if no room is available. Relocation notifies tutor and students but does not require a fresh price confirmation unless time or modality changes.

Series Booking Rules

Series bookings allow a student or group to book up to 4 sessions in one flow with the same tutor, session type, and group composition.

Series rules

- The booking form lists each session date and time explicitly; Phase 0 does not use abstract recurrence patterns.
- Maximum sessions per series: 4.
- Tutors accept or decline the full series as one package. Partial acceptance is not allowed.
- If the tutor declines the series, all held Marks are released immediately, the proposer is notified, and the proposer may re-book with adjusted dates.
- Marks for all sessions in the series are held upfront at booking confirmation. For group series, each participant's Marks are held individually.
- After tutor acceptance, tutor-initiated reschedule proposals follow the standard approval flow per affected session.

Series cancellation rules

- Solo series: a student may cancel an individual future session before that session's H-2 cutoff, and the held Marks for that session are released.
- Solo series: after H-2 or no-show, the Marks for that session are forfeited unless admin override is recorded.
- Full series cancellation before H-2 of the first session releases all held Marks for that series, unless group series no opt-out rules already apply after confirmation.
- Group series: once confirmed, participants cannot withdraw from the series as a whole and cannot self-service opt out of individual sessions.
- Group series: missed sessions follow late-cancel / no-show handling and do not affect other participants or other sessions in the series.
- Admin override is available for exceptional documented cases, with or without Marks return at admin discretion. Every override must be recorded in the audit log.

Required group series disclaimer

The following or equivalent text must appear before a group series is finalized and on the invitee acceptance screen:

This is a full-series commitment. Once confirmed, you cannot opt out of this series. Individual sessions missed after the H-2 cutoff are non-refundable. By proceeding, you confirm you are available for all listed dates and times.

Group series invitee information

- full list of all session dates and times,
- per-student price per session,
- total Marks held upfront across all sessions,
- no opt-out disclaimer,
- clear accept / decline action.

Notification Matrix

Event	In-app	Email	Notes
Booking request created	Yes	Yes, tutor only	Action required by tutor.
Account created	Yes	Yes, new student	Signup confirmation, onboarding entry point, login link, and brief platform introduction.
Group session or series invitation received	Yes	Yes, registered invitees	Email must include full schedule, per-student price, total Marks hold, and direct CTA to view and accept in-platform. Phase 0 invitations are only sent to registered Cogito users.
Student or group has confirmed a booking	Yes	Yes, assigned tutor	Tutor preparation notice. Include student or group name, session type, date, and time. For series, list all session dates and times.
Booking accepted / declined	Yes	Yes, student only	Critical booking outcome.
Online meeting link created	Yes	Yes, tutor and confirmed students	Sent only after all required participant, tutor, and admin conditions are complete.

Event	In-app	Email	Notes
Offline room confirmed / relocated / cancelled	Yes	Yes, tutor and confirmed students	Room changes are critical operational notices.
Student cancel before H-2	Yes	Yes, affected participants	Schedule-affecting change.
Late cancel / no-show / emergency override	Yes	Yes, affected participants	Penalty or correction event.
Tutor reschedule proposed / approved	Yes	Yes, affected participants	Requires student approval.
Group repricing / reconfirmation request	Yes	Yes, all current participants	Cost changes must be explicit.
Active Cogito take schedule changed	Yes	No	Notify every current tutor in-app; applies to future booking/repricing snapshots only. Identical saves do not emit a notification.
Payment / refund / emergency refund	Yes	Yes, payer	Wallet event.
Achievement submitted / reviewed	Yes	No	Keep review traffic in-app.
Reminder / non-critical update	Yes	No	Never consumes email quota.

Email dispatch is best-effort, rate-limited, and deduplicated by event key. In-app notifications are the source of record for all events. Student emails are intentionally limited to authentication / registration, group invitation CTAs, group size-change reconfirmation CTAs, critical booking outcomes, payment / refund events, online meeting links, and offline room changes. Non-critical reminders and informational updates remain in-app only.

Online Meeting Link Rules

Online classes require a meeting link for a 90-minute call after all booking conditions are complete.

Rules

- The platform creates the meeting link only after all required participants have accepted, repricing / reconfirmation is complete, and the tutor has accepted.
- Preferred provider is Google Meet using Cogito-controlled Google account infrastructure, subject to implementation validation of Google Calendar API capability and setup requirements.
- Desired automatic attendee behavior: the platform creates a Google Calendar event / Google Meet conference and adds the tutor email plus confirmed student account emails as event attendees.
- The meeting event must invite only the tutor and confirmed student account emails attached to the Cogito accounts in the booking.
- Before launch, implementation must validate Google API authorization method, account access, quota / cost implications, and whether automatic attendee restriction behaves as expected for external student emails.
- If Google API setup requires client action, developer and client should hold a setup meeting to connect the Cogito Google account securely and confirm the API configuration.
- The booking stores provider, external event id, meeting URL, attendee emails, creation status, and error status if creation fails.

- If automatic meeting creation fails, the booking remains valid but shows “meeting link pending” to the assigned tutor, admin, and affected users. The assigned tutor or an admin may add a manual meeting link as any valid URL, including Google Meet, Zoom, or another approved provider.
- Cogito admin will not admit unlisted emails to the meeting. Users must join using the same email address associated with their Cogito account unless admin manually corrects the attendee list.

Offline Room Booking Rules

Offline booking stays in Phase 0 but should be simplified so admin handles only room confirmation exceptions after student and tutor intent are clear.

Student-side rules

- Offline booking form includes a classroom selector or room preference section.
- Where room availability data exists, unavailable rooms are visible but not selectable.
- The booking summary shows that room assignment is pending admin confirmation until admin acts.

Tutor-side rules

- Tutor receives the offline booking after student / group confirmation is complete.
- Tutor accepts, declines, or proposes reschedule using the same booking response flow as online sessions.
- Tutor does not manage room assignment.

Admin-side rules

- Admin receives the offline room task only after the tutor accepts.
- Admin actions are: confirm selected room, relocate to another available room, or cancel class if no room is available.
- Relocation notifies tutor and confirmed students. It does not reopen participant confirmation unless the time, price, modality, or tutor changes.
- Cancellation releases held Marks according to normal cancellation state and records an audit reason.

Achievement Submission Fields and Moderation States

The achievements page shall let a student submit proof of achievement and surface approved items on Cogito's existing public landing page.

Submission fields

- title,
- category (competition, award, certificate, leadership, publication, other),
- short summary,
- issuer or institution,
- date earned,
- proof URL or file,
- optional public note or context,
- visibility flag.

Moderation states

- draft,
- pending_review,
- approved,
- rejected,
- archived.

Rules

- Only approved achievements may appear on Cogito's existing public landing page.
- Rejected achievements remain visible to the submitting student with the rejection reason.
- Admin review state changes must be audited.
- The dashboard CTA text may be shown as "Submit your achievements to show them off on Cogito Academy".

Session Notes

Phase 0 supports rich-text session notes for tutor-written post-session documentation. Structured scoring, rubric fields, and assessment recommendations are deferred.

Session note rules

- Session notes may include paragraphs, headings, bullet lists, numbered lists, links, bold text, and italic text.
- Rich-text content must be sanitized before rendering.
- The implementation may store editor JSON or sanitized HTML, but the rendered output must remain stable in booking history.
- File upload, image embed, scoring fields, rubric fields, and recommendation fields are out of Phase 0 unless separately approved.

Non-Functional Requirements

- Authorization is enforced server-side for every student, tutor, and admin action.
- Every booking, wallet, notification dispatch, and admin override writes an audit log entry with actor, timestamp, before state, after state, and reason.
- Booking, wallet, and notification updates that belong together must be written atomically where possible.
- Payment callbacks, refund callbacks, and notification jobs are idempotent by event id.
- All booking deadlines and schedule calculations are stored in UTC and rendered in the user's local timezone.
- In-app notifications are durable records; email is asynchronous and must not block booking writes.
- Historical booking and Marks ledger records are retained for dispute and support review.

Operational Edge Cases

- Payment succeeds but the browser closes before redirect; the webhook still credits once and only once.
- Payment or refund webhook arrives more than once; idempotency prevents duplicate wallet changes.

- Tutor declines after Marks are held; the hold is released and the booking state is updated once.
- Student tries to self-service cancel or reschedule after H-2; the action is blocked and the booking remains auditable.
- Group booking drops below the minimum confirmed headcount; the booking expires and held Marks are released.
- Group booking reprices more than once during reconfirmation; each new price requires a fresh confirmation cycle.
- Confirmed group participant withdraws before H-2; the withdrawing participant's hold is released, remaining participants must reconfirm the updated price, and the booking expires if reconfirmation fails.
- Confirmed group participant withdraws after H-2; late-cancel / no-show handling applies unless admin records an override.
- Offline group booking is accepted by tutor but no room is available; admin must propose a new slot / location or cancel the booking with held Marks released.
- Tutor invite is opened by a different logged-in user whose email does not match the invited email; the invite cannot be accepted by that user.
- Tutor invite expires or is revoked before acceptance; the link cannot create a tutor profile or attach tutor access.
- Existing user receives tutor invite; accepting the invite attaches tutor access to the existing account and must not create a duplicate account.
- Tutor onboarding is incomplete or pending review; the tutor profile remains hidden and cannot receive booking requests.
- Email delivery fails; in-app notification still persists and the booking or wallet write must not fail.
- Admin override on a terminal booking state requires a reason and audit entry before any compensating ledger change.

TDD Implementation Checklist

The implementation order shall be test-first by domain.

1. Write unit tests for booking state transitions before changing booking logic.
2. Write unit tests for Marks hold, release, refund, and deduction before wallet logic.
3. Write integration tests for student cancel / reschedule and admin emergency override before UI wiring.
4. Write integration tests for tutor reschedule approval and group repricing / reconfirmation before booking flow changes.
5. Write tutor invitation, account-claim, email-match, and tutor publication tests before tutor onboarding UI wiring.
6. Write notification routing tests before email or in-app dispatch code.
7. Write achievement submission and moderation tests before dashboard or landing-page surfaces.
8. Write RBAC, audit log, idempotency, and timezone tests before external integrations go live.

No feature is complete until the corresponding tests exist and pass.

Acceptance and Regression Test Cases

TC ID	Test Case	Pre-condition	Steps / Expected Outcome
TC-01	Verify role-specific login and access control.	Student, tutor, and admin accounts exist.	1. Log in as each role. 2. Attempt to open another role's page. The correct dashboard is shown for each role, and unauthorized access is denied.
TC-02	Verify student profile and optional parent contact data.	Student is logged in.	1. Edit the student profile. 2. Add or remove parent contact information. The profile saves correctly, and the parent contact field may remain blank without error.
TC-03	Verify Marks purchase updates the wallet ledger.	Student has a known starting balance.	1. Complete a successful payment. 2. Inspect the wallet history. Balance increases exactly once and a matching ledger entry is created.
TC-04	Verify failed or pending payment does not credit Marks.	A payment attempt is started.	1. Simulate failed or pending payment status. 2. Check the wallet balance. No credit is added and no completed purchase entry appears.
TC-05	Verify tutor honorarium constraints and Cogito schedules.	Tutor can edit base honoraria; admin can review them and edit the active Cogito take schedule.	1. Try to publish a base honorarium below Rp50,000 or outside Rp5,000 increments. 2. Publish valid online and offline base honoraria. 3. Inspect the derived class-size breakdown. Invalid IDR values are rejected, valid values produce the active modality increments for class sizes 1–6, and no tier-based pricing or Marks cash-out rate is used.
TC-06	Verify IDR honorarium, Cogito take, and Marks conversion.	Tutor has the default online base honorarium of Rp175,000 and default offline base honorarium of Rp225,000.	1. Calculate online class for 1 and online class for 3. 2. Calculate offline class for 1 and offline class for 3. 3. Inspect the stored economic snapshot and student hold. Online class for 1 is $\text{Rp175,000 tutor honorarium} + \text{Rp50,000 Cogito take} = \text{Rp225,000} = 45 \text{ Marks}$. Online class for 3 is $\text{Rp235,000} + \text{Rp90,000} = \text{Rp325,000} = 65 \text{ total Marks} = 22 \text{ Marks per student}$ and 66 actual Marks pooled. Offline class for 1 is $\text{Rp225,000} + \text{Rp90,000} = \text{Rp315,000} = 63 \text{ Marks}$. Tutor compensation remains an IDR honorarium and is not calculated as Marks cash-out.
TC-07	Verify tutor listing shows the required booking information.	Multiple tutors and modalities are configured.	1. Open the tutor list. 2. Review each tutor card. Each card shows summary profile, expertise, availability, modality, and the computed Marks per student for the relevant class sizes; tutor-facing views show IDR honorarium details separately.

TC ID	Test Case	Pre-condition	Steps / Expected Outcome
TC-08	Verify admin-invited new tutor account claim.	Admin is logged in and invited email has no existing account.	1. Admin sends tutor invite. 2. Tutor opens invite link and creates an account. 3. Tutor verifies email ownership and starts onboarding. A user account and draft tutor profile are created, the invite becomes accepted, no admin-created password exists, and the tutor is not visible in discovery before publication.
TC-09	Verify tutor invite attaches to existing user by email.	A user already exists with the invited email.	1. Admin sends tutor invite to the existing user's email. 2. Existing user opens invite and authenticates. 3. Inspect user and tutor profile records. Tutor access attaches to the existing user, no duplicate user is created, invite acceptance is audited, and email mismatch cannot accept the invite.
TC-10	Verify tutor onboarding review and publication gate.	Tutor has accepted invite and opened onboarding.	1. Leave required onboarding fields incomplete. 2. Attempt to submit or publish. 3. Complete required fields and submit for review. 4. Admin requests changes, approves, then publishes. Incomplete onboarding cannot be published, pending review is visible to admin, requested changes return the tutor to correction flow, and only published tutors appear in discovery or receive booking requests.
TC-11	Verify solo booking lifecycle.	Student has enough Marks and tutor has an available slot.	1. Create a solo booking. 2. Let the tutor accept the booking. 3. Complete the session. The booking moves through the correct status lifecycle and the wallet reflects the final outcome.
TC-12	Verify group booking finalization rules.	Group booking template and invitees are available.	1. Create a group booking. 2. Invite participants. 3. Reach the target group size. 4. Finalize the session. The booking only finalizes when the required confirmation rules are satisfied, and repricing or final rate is correct.
TC-13	Verify tutor-side operational tools.	Tutor account is active.	1. Set availability. 2. Open an incoming booking. 3. Accept or decline it. 4. Add a rich-text session note with heading, bullets, link, and emphasis. All actions persist, session note formatting renders safely in booking history, and no structured assessment fields are required.
TC-14	Verify student can cancel before H-2 without penalty.	Student has a future booking that is more than H-2 away.	1. Open the booking. 2. Cancel it before the cutoff. The booking is cancelled, no late penalty is applied, and the Marks state is released or refunded according to the booking hold rules.

TC ID	Test Case	Pre-condition	Steps / Expected Outcome
TC-15	Verify student can reschedule before H-2 without penalty.	Student has a future booking that is more than H-2 away.	1. Open the booking. 2. Move it to another available slot before the cutoff. The booking updates to the new slot, no student penalty is applied, and the wallet remains consistent.
TC-16	Verify late cancel after H-2 is locked and can be overridden.	Student has a booking inside the H-2 window.	1. Attempt self-service cancel. 2. Confirm the booking is locked and Marks are deducted. 3. Let an admin apply an emergency override. Self-service cancel is blocked, the late-cancel / no-show rule applies by default, and the admin override is audited and can restore Marks.
TC-17	Verify tutor-initiated reschedule requires student approval.	Tutor and student both have access to the booking.	1. Tutor proposes a new slot. 2. Student reviews the change. 3. Student approves it. The booking only moves after student approval, no student penalty is applied, and the change is visible in history and notifications.
TC-18	Verify partial group approval triggers repricing and reconfirmation.	Group booking has target size 5 and deadline expires with 3 approvals.	1. Wait for the deadline. 2. Inspect the repriced session total. 3. Ask remaining participants to reconfirm. The system recalculates Marks for 3 participants, sends the new price to all remaining participants, and only finalizes after the final confirmed participants accept the repriced total.
TC-19	Verify confirmed group withdrawal before H-2 triggers repricing.	Group booking is fully confirmed and more than H-2 away.	1. Let one confirmed participant withdraw. 2. Inspect released Marks for the withdrawing participant. 3. Ask remaining participants to reconfirm the updated price. The booking only continues if all remaining participants accept the updated price before the reconfirmation deadline; otherwise it expires and held Marks are released.
TC-20	Verify offline group booking requires admin room approval.	Offline group booking has accepted participants and tutor acceptance.	1. Complete participant confirmation and tutor acceptance. 2. Inspect booking state before room assignment. 3. Let admin assign a room. The booking remains awaiting admin room approval until admin assigns or approves a room; after approval, it becomes scheduled. If no room is available, admin can propose a new slot / location or cancel with held Marks released.
TC-21	Verify notification routing keeps in-app complete and email limited.	Notification preferences are enabled.	1. Trigger a schedule change. 2. Trigger a non-critical reminder. 3. Inspect in-app notifications and email inbox. All events appear in-app, schedule changes send email, and non-critical reminders do not consume email.

TC ID	Test Case	Pre-condition	Steps / Expected Outcome
TC-22	Verify achievements submission CTA and moderation flow.	Student account can open the dashboard.	1. Open the Achievements page. 2. Click the submission CTA. 3. Submit an achievement. 4. Approve or reject it as admin. The CTA is visible, submissions are stored for review, and only approved achievements become eligible for public display.
TC-23	Verify series booking upfront hold and tutor package decision.	Student has enough Marks and tutor has four available slots.	1. Create a 4-session series with explicit dates. 2. Confirm booking. 3. Let tutor accept or decline the series. Marks for all sessions are held upfront, all dates are visible, tutor decision applies to the full series, and decline releases all held Marks.
TC-24	Verify group series no opt-out policy.	Group series is confirmed and more than H-2 away.	1. Open the participant cancellation action. 2. Attempt to opt out of one session or the full series. 3. Review admin override path. Self-service opt-out is blocked, required disclaimer is visible, and only admin override can return Marks for exceptional documented cases.
TC-25	Verify group series invitee acceptance.	Group series invitation exists for an invitee with enough Marks.	1. Open the invite. 2. Review all listed dates and times, per-session price, total Marks hold, and no opt-out disclaimer. 3. Accept the invite. Invitee can only accept after the required information is visible, and their Marks are held for the full series.
TC-26	Verify group series invitee decline.	Group series invitation exists for an invitee.	1. Open the invite. 2. Decline it. 3. Inspect booking state and wallet state. The invitee is not added to the confirmed participant set, no Marks remain held for that invitee, and the booking does not finalize unless remaining confirmation rules are satisfied.
TC-27	Verify group series tutor decline releases all holds.	Group series has confirmed participants and upfront holds.	1. Let tutor decline the full series. 2. Inspect each participant wallet. 3. Inspect proposer notification. All held Marks are released for every participant, the proposer is notified, and the proposer can re-book with adjusted dates.
TC-28	Verify group series participant lacks Marks.	Invitee has less available Marks than the total series hold.	1. Open the group series invite. 2. Attempt to accept. 3. Follow top-up path if shown. Acceptance is blocked until enough available Marks exist for the full upfront hold, and no partial hold is created.

TC ID	Test Case	Pre-condition	Steps / Expected Outcome
TC-29	Verify group series maximum length.	Student is creating a series booking.	1. Select four sessions. 2. Try to add a fifth session. Four sessions are allowed, the fifth session is blocked, and copy explains the Phase 0 maximum.
TC-30	Verify group series no-show affects only one session.	Group series is confirmed with multiple scheduled sessions.	1. Mark one participant as no-show for one session after H-2. 2. Inspect remaining sessions and other participants. Marks for the missed session are forfeited for that participant, other sessions remain scheduled, and other participants are unaffected.
TC-31	Verify group series admin cancels one session.	Group series is confirmed and admin has an exceptional cancellation reason.	1. Admin cancels one session in the series. 2. Choose whether Marks return applies. 3. Inspect other sessions. The admin action is audited, selected Marks handling is applied only to the affected session, and other sessions remain intact.
TC-32	Verify group series does not deduct Knowledge Bank access fee.	Student has at least 35 Marks and can access Knowledge Bank before accepting a group series invite.	1. Accept a group series that places a full upfront hold. 2. Open the Knowledge Bank. 3. Inspect wallet ledger. Knowledge Bank access follows the 35-Mark wallet-balance rule, opening the Knowledge Bank creates no deduction entry, and group-series hold / release entries remain separate from content access.
TC-33	Verify group series one-session tutor reschedule.	Group series is confirmed and tutor wants to move one session.	1. Tutor proposes a new time for one session. 2. Participants review and approve or reject. 3. Inspect unaffected sessions. Affected participants must approve the changed session, no student penalty applies, and other sessions remain unchanged.
TC-34	Verify group series idempotent accept and hold.	Group series invitee acceptance can be submitted more than once due to retry or duplicate request.	1. Submit the same accept action twice. 2. Inspect participant state and wallet ledger. The invitee is confirmed once, the Marks hold is created once, and duplicate attempts do not create duplicate ledger entries.
TC-35	Verify purchased Marks cannot be converted to rupiah.	Student has unused purchased Marks.	1. Open wallet and purchase history. 2. Look for cash-out or convert-to-rupiah action. 3. Trigger normal booking cancellation before H-2. No cash-out action exists, unused Marks remain in wallet, and cancellation releases held Marks back to available Marks rather than creating an IDR refund.

TC ID	Test Case	Pre-condition	Steps / Expected Outcome
TC-36	Verify Google Meet attendee automation or fallback.	Online booking is fully confirmed with tutor and student emails, and Google API setup has been validated or fallback mode is active.	1. Finalize an online booking. 2. Inspect the created Google Calendar / Google Meet event or fallback state. 3. Inspect booking notification. If Google API setup is enabled, the event includes the tutor email and all confirmed student emails as attendees, stores provider event id and meeting URL, and sends the meeting link only after final confirmation. If setup is not enabled or event creation fails, booking shows "meeting link pending" and the assigned tutor or admin can add a manual link.
TC-37	Verify 15-minute lateness policy and tutor no-show report.	Confirmed online booking has reached scheduled start time.	1. Tutor does not arrive for 15 minutes. 2. Student clicks report tutor lateness / no-show. 3. Inspect booking, wallet, and admin queue. 4. Admin verifies and applies override. A report is created, Marks do not change from report alone, admin sees an auditable exception item linked to the booking, and affected students' held Marks are returned only after admin verification / override.
TC-38	Verify 12-hour response windows and hold release after scheduling failure.	Group booking or offline booking is waiting for a required response.	1. Let the relevant 12-hour response window expire. 2. Inspect booking state and wallet. 3. Inspect countdown / status copy. The booking expires or moves to the correct failed scheduling state, held Marks are released within 12 hours after failure / expiry, and users can see the response window status.
TC-39	Verify payment-error refund reconciliation prevents blind cash refund.	A duplicate or incorrect payment created extra Marks, and some Marks may have been spent.	1. Open admin payment / wallet override flow. 2. Review payment record, ledger entries, Marks credited, Marks spent, and remaining wallet balance. 3. Attempt cash refund. Admin must reconcile usage before refunding, cannot issue blind full cash refund when credited Marks were already spent, and any correction creates audit and ledger/payment references.

Release Governance

Release Acceptance Criteria

The project may move from build to release only when all of the following are true:

- FR-01 through FR-24 are implemented and verified in staging.
- All open questions are either answered or explicitly deferred with an owner and target date.
- Marks package sizes and real-money prices are approved.
- The staging demo covers signup, wallet purchase, solo booking, group booking, tutor workflow,

admin override, notifications, and achievements.

- No release-blocking bugs remain open.
- Client sign-off is recorded for all user-facing copy and price-related flows.

Definition of Done

A feature is done only when all of the following are true:

- The requirement is implemented in the app and backend where applicable.
- Server-side authorization exists.
- Audit, ledger, and notification behavior exists where applicable.
- Regression or domain tests exist and pass.
- User-facing copy has been reviewed when the feature exposes visible text.
- The PRD, changelog, and test cases remain aligned.

Operational Ownership

Area	Owner
Product scope and change control	Product owner and client approver.
Technical implementation choices	Technical lead.
Booking disputes and emergency overrides	Admin operator.
Payment and refund reconciliation	Admin operator with finance support if needed.
Achievement moderation	Admin operator.
PRD maintenance and versioning	Product owner.
Staging sign-off	Client representative plus product owner.

Launch Checklist

- Package pricing is approved.
- Open questions are resolved or explicitly deferred.
- Permissions matrix is validated against the actual build.
- Staging demo is completed end to end.
- Regression suite is green.
- Support and admin runbook is ready.
- Client sign-off is recorded.
- Release notes are published.

Development Handoff Notes

The PRD is ready for development handoff. The build should proceed with the following implementation priorities and validation notes:

- Treat Google Meet automation as an early technical spike. Target behavior is automatic Google Calendar / Google Meet event creation with tutor and confirmed student emails as

attendees. Manual meeting-link entry remains the guaranteed v1 fallback if API setup blocks launch.

- Arrange a client / developer setup call if Google API authorization requires access to Cogito Academy's Google account.
- Implement the booking, Marks ledger, and override domains test-first. The highest-risk rules are 12-hour response windows, IDR honorarium and Cogito take calculations, Rp5,000 Marks conversion and per-student rounding, no Marks-to-rupiah conversion, admin-verified tutor no-show return, and payment-error reconciliation.
- Build admin override UX as a guarded workflow with required reason, category, affected users, Marks action, before / after preview, and audit history. Do not implement one-click override actions.
- Use Cogito Academy WhatsApp support number +62 881-0119-90195 for support button and SLA escalation configuration.
- Phase 0 flags tutor reliability issues for admin review only. Do not auto-suspend tutors based on no-show / lateness counts.

Assumptions and Constraints

- Phase 0 is focused on the operating core, not the full long-term platform vision.
- A separate parent account is intentionally deferred.
- Existing Competition Calendar and Knowledge Bank assets remain active and are reused rather than rebuilt.
- Payment vendor approval and integration timelines may affect the release schedule.
- Group booking rules, including deadline repricing and reconfirmation, are finalized before implementation.
- All Phase 0 sessions are 90 minutes.
- Marks do not expire in Phase 0.
- H-2 means two hours before the scheduled booking start time.
- Payment gateway implementation depends on successful account setup, approval, and operational readiness from the selected payment provider.
- Google Calendar and Google Meet automation depend on Google Workspace configuration, API availability, authorization setup, quota limits, and third-party service behavior.
- Email delivery behavior may vary depending on provider policies, spam filtering, recipient mailbox configuration, and external email infrastructure.
- External service outages, API changes, vendor-side limitations, or third-party policy changes are outside the scope of the platform itself.

Appendix

Glossary

- **Marks:** Cogito's internal booking currency. Marks are not transferable between accounts and have no value outside the platform.
- **Ledger:** the immutable transaction history for Marks movement.
- **Available Balance:** total Marks balance minus held Marks.
- **Computational Mark Value:** Rp5,000 used to calculate class totals and convert IDR economics into Marks.
- **Marks Acquisition Rate:** the package-specific student purchase price per Mark, ranging from Rp6,250 to Rp5,000.

- **Platform Spread:** the difference between the student's package purchase price and the Marks' Rp5,000 computational value, retained by Cogito at purchase.
- **Tutor Base Honorarium:** the tutor-configured one-student IDR honorarium for a supported modality, in Rp5,000 increments and no lower than Rp50,000.
- **Tutor Honorarium:** the tutor base honorarium plus the modality-specific increment for each additional student.
- **Cogito Take:** the IDR platform fee calculated from the fixed online or offline modality schedule.
- **Marks per Student:** the ceiling of total Marks divided by the confirmed headcount.
- **Actual Marks Pooled:** Marks per student multiplied by the confirmed headcount; this is the amount held or deducted from the participants.
- **Direct IDR Compensation:** tutor honorarium paid by Cogito from its operating account; it is not a Marks cash-out.
- **Hold / Release / Refund:** wallet states tied to booking outcomes.
- **Series Booking:** up to 4 explicitly selected sessions booked as one package with the same tutor, session type, and group composition.
- **Tutor Invite:** admin-created invitation that allows a specific email address to claim or attach tutor access.
- **Tutor Onboarding:** required tutor setup flow completed after invite acceptance and before admin publication.
- **Published Tutor:** approved tutor profile that is visible in student discovery and eligible to receive booking requests.
- **Repricing:** recalculation of group session pricing when group size or confirmation state changes.
- **Reconfirmation:** the follow-up approval step after repricing that each remaining participant must complete.
- **Booking state machine:** the canonical booking lifecycle and permitted transitions.
- **Audit log:** immutable record of who changed what, when, and why.
- **Idempotency:** repeated external events produce the same outcome once.
- **Deadline at:** stored cutoff time after which confirmation or reconfirmation expires.
- **H-2:** two hours before the scheduled booking start time.
- **Late cancel / no-show:** a late change after H-2 that is blocked by default and may trigger Marks deduction.
- **Critical notification:** a booking, payment, refund, or schedule-change event that also sends email.
- **Achievements:** student-submitted items that may be moderated before public display.
- **Editorial content source of truth:** the existing Sanity CMS that owns Competition Calendar and Knowledge Bank content, with authenticated app delivery.

Booking Flow Diagrams

The diagrams below are rendered as images for the PDF. The Mermaid source is kept under `diagrams/` for engineering modification; this PRD does not include the source in the body so the visual is the single source of truth for the client.

Student booking and operational approval flow
