Cogito Release v3

Product Requirements Document

PRD with commercial quotation, Appendix A

19 October 2026

Date: 19 October 2026. Owner: project owner; client approval owner to be confirmed (Q14). Status: **scope baseline locked for quotation COGITO-V3-ADD-20261019-R1; client acceptance pending**. Open decision-register items remain gates for dependent behavior. No implementation completion is implied. Entry point for development: this PRD, then SPEC and TASKS.

1. Purpose and authority

Implementation started by project-owner instruction on 18 October, branch `f/release-v3`: T01 default pricing arithmetic and golden tests are implemented. Runtime configuration and checkout activation are pending; see TASKS for evidence. The project owner has since locked the additional-scope fee at Rp5,500,000 and set W1 November (1-7 November 2026) as the target production release window. These terms are issued for client acceptance; they do not close the decision register or imply client acceptance, payment, UAT approval or release readiness.

Deliver the revised Marks economy, public cohorts/masterclasses, session reports, auditable tutor/KOL finance, registration referrals and a website backed by app data. Students should understand what is held, spent and returned; tutors should understand earned fees and deductions; admin should reconcile external transfers without spreadsheets becoming the hidden source of truth.

Source S01: 18 October scope PDF, 11 pages. Source S02: direct user clarification in this chat, 18 October: website English required, Indonesian optional, both inputs available; app full English. Source S03: code audit, app HEAD `14dc4486`, website checkout `ab43c2fc`. S03 describes baseline, not product authority.

S01 supersedes earlier proposals/old PRD where it explicitly changes rules; existing on-demand charging/cancellation stays otherwise. S02 overrides language ambiguity in S01. Recommendations in DECISIONS and technical proposals in SPEC are not client-approved additions. An OPEN decision gates its dependent behavior, not this entire PRD. Original client v3 correspondence was not independently verified.

Source S06: direct project-owner instruction in this chat, 19 October 2026: fix the additional-scope fee at Rp5,500,000, target production release during W1 November (1-7 November 2026), and include competition type CRUD in the quoted scope. This sets the commercial baseline; it is not client acceptance.

2. Users, scope and exclusions

Additional scope S04 — competition catalog management

Source S04: direct project-owner instruction in this chat, 18 October 2026: add CRUD for competition types at both parent and child levels, adjust affected features, and plan it before implementation. This is an addition to S01, not a claim that the original PDF already contained

it. The following operational rules are the development design for this addition. S06 includes this scope in the quoted baseline; client acceptance remains pending.

Source S05: subsequent direct project-owner clarification in this chat: each parent competition needs four configurable colors: light text/background and dark text/background. This is included in this catalog addition.

Requirement	Acceptance criteria	Source
REQ-COMP-01	Admin can list/search, create, read, edit names/descriptions/order, archive/reactivate, and delete eligible unused parent competitions and child specializations. Both levels have required English and optional Indonesian inputs; the app displays English. Two levels only: a child belongs to one parent; self-parenting, cycles, third levels and conversion between parent/child are rejected.	S04; S02
REQ-COMP-02	Use stable identities; changing a display name/order never changes tutor assignments or historical booking/report/fee identities. New entries require unique stable slugs/codes. Existing IDs/slugs are retained during migration; identity codes become read-only after creation. Concurrent edits fail with a reload/review action instead of overwriting another admin. All mutations require admin authorization and an audit reason with before/after values.	S04; REQ-AUDIT-01
REQ-COMP-03	Parent competition owns the versioned on-demand rate; children inherit it and do not introduce separate pricing overrides. A new parent starts as a draft with explicit required Marks/IDR rates; no default-to-cheapest fallback. Publication/new sales require a valid applicable rate, active parent and active child. Initial seven competitions are seed defaults, not a maximum or a closed list.	S04; REQ-ECON-01..04
REQ-COMP-04	Archive hides the affected parent/subtree or child from new selections, discovery filters and new booking/class publication. Existing tutor assignments, accepted bookings, quotes, classes/enrollments, reports and financial snapshots remain readable and keep their agreed terms; no automatic cancellation or repricing. Admin sees affected-use counts before confirming. A child cannot become publicly selectable while its parent is inactive. Reactivation rechecks parent and price readiness.	S04; REQ-ECON-04

Requirement	Acceptance criteria	Source
REQ-COMP-05	Hard delete is allowed only for an unused child, or an unused parent with no children, after server-side reference checks. Referenced entries return a conflict directing admin to archive; never cascade-delete tutors/classes/history. Child moves between parents are allowed only before any use, with destination validation; referenced children keep their parent and require a new entry plus archive to change classification. Delete/move racing with assignment or booking must not leave dangling references or change agreed prices.	S04; data-preservation design
REQ-COMP-06	One catalog feeds admin forms, tutor invitations/onboarding/profile editing, discovery/filter counts, booking selection/preview/server validation, rate editor/read-only tutor rates, cohort/masterclass forms, Activities/public tutor website projections and report labels. Current eligible choices and historical labels are separate: unrelated profile edits must not force removal of archived assignments. Remove fixed competition enums/arrays from runtime eligibility; historical revision readers still support existing stored slug keys.	S04
REQ-COMP-07	Admin configures four parent colors: light text, light background, dark text and dark background, with previews in both themes. New parents require all four; editing any subset retains omitted values. Child specializations inherit the parent's palette and cannot submit overrides. Current chips/badges, tutor/discovery labels and calendar/booking presentation consume the configured palette rather than a seven-type alias map. Required labels remain visible independently of color. Validate numeric opaque OKLCH values server-side; reject arbitrary CSS, variables, URLs and alpha. Preserve the existing seven palettes during migration, and keep historical labels/prices intact when appearance changes.	S05

Design example: renaming Debate changes its current catalog label, while an existing booking retains its saved label and rate. Archiving Debate prevents new selections under it but does not cancel next week's accepted booking. Adding a new competition requires entering its rates before it can be sold. Indonesian labels never become required for saving or for the English app.

Excluded from this addition: arbitrary-depth taxonomy, bulk import/merge, per-child price overrides, automatic reassignment and rewriting historical labels/prices. These are not necessary for parent/child CRUD.

Actor	Job to accomplish
Student	Sign up with verified identity/optional one-time code, purchase Marks, choose class/plan, view precise balance/seat/deadlines, cancel under policy, read/export own reports, track referral rewards
Tutor	View immutable fee terms, see assigned sessions, report absence, complete three-field reports, view tax/transfer deductions and covered payout sessions
Admin	Configure economy/tax/campaigns, publish/manage classes and sessions, resolve exceptions, prepare/record/void finance records with audit, manage website content/FAQ and export reports/CSV
Website visitor	Read English content or optional Indonesian, see app-backed Activities/published tutors, access full FAQ and correct class/registration links
Finance/client approver	Confirm tax defaults/wording, reconcile external transfers and accept launch criteria

In scope: all S01 sections including landing refinements and fixed branded PDF template. Out of scope: cash refunds, bank transfer automation, outgoing Midtrans, manual direct-transfer student top-ups, waitlist, school/private cohort, parent accounts, WhatsApp notifications, new attendance sheet/per-student notes, report template editor, full website redesign or new editorial preview/publish roles. Existing attendance machinery may remain for legacy on-demand; it does not authorize a new attendance product.

3. Canonical terms

Term	Meaning
On-demand booking	Existing solo/group/2-4 session series workflow, preserving existing cancellation/confirmation policy except explicitly changed economy/report features
Big class	Shared public class entity with kind cohort or masterclass; distinct from a legacy series booking
Session	One scheduled delivery with one tutor, start/end, one completion report and one fee entitlement
Enrollment	A student's selected session set and price/plan terms; a full/half plan is not a second wallet

Term	Meaning
Entitlement / seat	Student's right to one session, with reservation/payment/cancellation/access state; capacity belongs to the session
Checkout reservation	Temporary 15-minute seat/price lock while the student completes purchase/enrollment
Hold	Marks moved from available to held without changing wallet total
Deduction	Spending the correct held session share, reducing held and total
Return	Releasing held Marks back to available, never paying cash
Earned fee	One tutor's gross entitlement for one delivered/completed session; reassignment/profile edits cannot rewrite it
Payout	Admin's record of an external tutor transfer, with explicit included fees/tax/bank/amount snapshots
Attribution	One saved registration referral choice and its immutable reward/campaign terms
Commission	KOL amount owed from one qualifying top-up; different from money actually transferred
Settlement	External KOL transfer records reconciled against calculated commission; can be partial or overpaid

Do not reuse "refund" for a new cash-refund promise. Historical provider reversal/correction remains a distinct reconciliation concern.

4. Language, permissions and common rules

Requirement	Rule and acceptance criteria	Source / decision
REQ-LANG-01	All website-authored public content has non-empty English for required fields; admin offers English and optional Indonesian inputs. Saving a required title/question/answer with only Indonesian fails with English validation. App interface is entirely English. Shared class content in app reads English. Existing user/tutor-entered text is not automatically translated.	S02
REQ-LANG-02	Proposed: Indonesian pages use Indonesian when present and English otherwise, per field. Ordering/active/landing flags are shared across languages. No Indonesian app chrome or mandatory Indonesian content entry.	S02; fallback is implementation proposal

Requirement	Rule and acceptance criteria	Source / decision
REQ-ACCESS-01	Only authorized admin changes economy, class, tax, campaign, payout, FAQ/content settings. Students cannot read another student's reports/financial records. Tutor sees own finance and assigned-session data. Public responses contain no NIK, NPWP, bank or internal finance. Validate through direct API calls as well as UI.	S01 §§2-6
REQ-AUDIT-01	Financial/admin corrections preserve actor, server time, required reason and before/after values; repeated requests do not repeat credits, deductions, fee creation, allocation or commission. No silent mutation of completed financial history.	S01 §§3-5
REQ-WALLET-01	Existing Marks stay unchanged; purchased/bonus share spending rules and never expire. Total = available + held, all nonnegative after every operation and under concurrency. UI labels held versus available and exact release/charge.	S01 §§1-3

5. Economy and incoming payments

Canonical defaults

Code	Marks	Rate/Mark	Price IDR
starter	50	7000	350000
learner	150	6500	975000
explorer	250	6000	1500000
pioneer	500	5500	2750000

Exact amounts other than 50/150/250/500: 1-149 at 7250; 150-249 at 6750; 250-499 at 6250; 500+ at 5750. Exact package amounts use package prices. Recommend next larger package if custom cost >= package price. Q13 confirmed by project owner: keep both custom and recommended choices; tier thresholds follow configured package Marks and unit prices plus surcharge.

Competition	Online solo Marks	Online solo tutor fee IDR
Model UN; World Scholar's Cup	50	200000
Debate; Olympiad	44	180000
Essay & Writing; Business; Public Speaking	38	160000

For confirmed N=1..6: online total = solo + 12*(N-1), perStudent = ceil(total/N), tutorFee = soloFee + 30000*(N-1). Offline total = solo + 22 + 20*(N-1), perStudent = ceil(total/N), tutorFee = soloFee + 75000 + 50000*(N-1). Collected Marks = N*perStudent; do not redistribute rounding residues through hidden discounts. Fee depends on confirmed booking headcount, not attendance.

Requirement	Acceptance criteria	Source / decision
REQ-ECON-01	Admin views/edits package amounts/prices, exact surcharge, competition base Marks/fees, online Marks/fee increments and four offline adjustments. Saves show 1-6 student preview and reject invalid/negative/inconsistent configuration. Tutor can view fee tables but direct price mutation is rejected. Numeric-setting inventory in SPEC defines product versus technical settings.	S01 §2; Q13
REQ-ECON-02	Default quote examples: 31 -> 224750; 176 -> 1188000; 320 -> 2000000; 600 -> 3450000. 140 -> custom 1015000 with recommendation 150/975000. 50 -> 350000, 150 -> 975000, 250 -> 1500000, 500 -> 2750000. Equality also recommends.	S01 §2
REQ-ECON-03	MUN online N3 = 25 each, 75 collected, fee 260000; offline N3 = 38 each, 114 collected, fee 375000. The initial seven competition groups x two modes x N1-6 have golden acceptance tables; added parents receive configured rates and dynamic validation per REQ-COMP-03/06. Selection uses competition of booking, not the tutor's cheapest specialization.	S01 §2
REQ-ECON-04	New quotes/bookings use active config; existing price/fee snapshots stay authoritative after admin edits and headcount recalculation uses that booking's locked parameter version. Existing wallet balances and historical paid records are not repriced. Pending checkout behavior follows SPEC migration policy proposal.	S01 §2
REQ-PAY-01	Incoming payment remains Midtrans. Only authoritative success credits quoted Marks once; browser return is insufficient. Duplicate PAID/SETTLED/reconcile events do not re-credit. Provider fees do not inflate purchased Marks. Failure/retry does not create multiple intended purchases.	S01 boundary/§3
REQ-PAY-02	15-minute seat/price reservation expiry never deletes a genuine payment: late success still credits wallet exactly once. Enrollment after expiry requires available capacity and an explicit current enrollment decision. Never promise a seat solely because top-up succeeded.	S01 §3

6. Cohorts and masterclasses

Defaults: cohort full 20/session, half 22/session, single 25/session; flat tutor fee 400000/session. Masterclass one session, one seat price 5, flat tutor fee 300000. Admin-editable defaults. No tutor acceptance step after externally coordinated assignment.

Requirement	Acceptance criteria	Source / decision
REQ-CLASS-01	Admin creates type/competition, title, description, capacity, supplied cover, dates and session tutors. Cohort sessions require title and curriculum description. English required/Indonesian optional on website fields. Tutor may differ per session. Masterclass has exactly one session.	S01 §3; S02; Q05
REQ-CLASS-02	Publishing creates one Meet per online session through existing integration, with retry/manual resolution of provider failure. Re-publish/retry cannot create duplicate active meetings. Changes notify affected tutors/students without acceptance. In-person behavior gated by Q05.	S01 §3
REQ-CLASS-03	App Classes displays cohort cards with a cover, title, session count, start date, tutor, and starting price and complete curriculum; Upcoming classes contains masterclasses and individually available cohort sessions ordered by date. Cohort session tag opens parent. Website Activities uses same records and corresponding cards. English app copy.	S01 §3/§6; S02
REQ-ENROLL-01	Full 16-session plan holds 320, deducts 20 per completion; half holds 176 for first 8 then 176 for second 8, deducts 22/session; single holds/deducts 25; masterclass holds/deducts 5. For odd session count first half has ceil(S/2), second remainder. Only allocated sessions can spend their holds.	S01 §3
REQ-ENROLL-02	Concurrent last-seat attempts have at most one winner per session; same student cannot buy overlapping entitlement to same session via full/half/single/retry. Whole plan succeeds atomically or no partial seats/holds remain. Temporary reservations expire after 15 minutes.	S01 §3; Q01
REQ-ENROLL-03	Second-half email and in-app reminders at 7 days and 1 day before relevant start contain Pay action. Paid second half holds Marks; unpaid removed from remaining roster at first second-half session start. Jobs catch up after downtime without double effect. Late join with <7/<1 day does not receive misleading historical reminders.	S01 §3; Q01/Q02
REQ-ENROLL-04	Late join pays all remaining sessions at full rate or first half of remaining at half rate then remainder. Rejoin after nonpayment buys only future sessions at half rate while seats remain, no charges for missed sessions. Persist explicit selected session IDs; no retroactive charge due to schedule reorder.	S01 §3; Q01/Q02

Requirement	Acceptance criteria	Source / decision
REQ-CLASS-04	Admin minimum/check date allows continue, postpone once or cancel. Notifications email/in-app. Postponement grants three days to leave without withdrawal deduction. Check counts, later reschedule and start/exit overlap follow Q04. Cancel-running only returns unspent holds, never erases delivered fees.	S01 §3; Q04
REQ-CLASS-05	Tutor absence report from session page records notice time; <24h counts as late cancellation visible per tutor to admin. Admin replaces/reschedules; no deduction before delivery/completion. Reassigning tutor cannot rewrite already-earned fee ownership.	S01 §3; Q03/Q05

Cancellation outcomes

Case	Student Marks	Tutor fee
Cogito cancels before start	All holds released	None
Cogito cancels running cohort	Remaining holds released	Delivered sessions retained
Withdraw full cohort	Remaining held less rounded 20% fee	Already earned unchanged
Withdraw half	Current-half remainder less rounded 20%; no next-half charge	Already earned unchanged
Cancel one seat >=24h early, including a full/half member	Per-session share less rounded 20% returned; other sessions untouched	Session-wide flat-fee policy Q03
Later cancellation/no-show	Normal session share charged on applicable completion	Delivered/reported session fee; Q03/Q06
Tutor no-show	Full share release or free reschedule	None for undelivered session
Technical failure	Free reschedule	Earn only when replacement delivered
Exit during qualifying postponement window	Relevant remaining holds released, no withdrawal charge	Earned fees unchanged

Requirement	Acceptance criteria	Source / decision
REQ-CANCEL-01	Return means available Marks, never cash; display on purchase, checkout and FAQ using Cogito-approved wording. Show deadline/exact fee/exact return before confirmation. 220 remaining -> 44 charge +176 return; full session20 ->4+16; half22 ->4+18; single25 ->5+20; masterclass5 ->1+4.	S01 §3
REQ-CANCEL-02	Exactly 24h before start qualifies. Charge is rounded nearest whole Mark on the applicable remaining/session allocation, not on original paid package IDR. Repeat cancellation/completion race settles each allocation only once. No next-half collection on withdrawal. Rules above do not overwrite legacy on-demand cancellation policy.	S01 §3
REQ-CANCEL-03	Cancellation preserves historical seat/financial events so reports/rewards use correct eligibility. Zero seat, fully released seat, retained no-show and unpaid seat have distinct outcomes; Q03/Q06 define client policy.	S01 §§3-5; Q03/Q06

7. Reports and tutor finance

Requirement	Acceptance criteria	Source / decision
REQ-REPORT-01	One report per delivered session across all class types. Fields discussion/session focus, strengths/positive observations, improvements/points of improvement. Each field nonempty, bullet/line entry, max 600 characters total after documented normalization, both UI/server enforced. No new field/attendance/per-student notes.	S01 §4
REQ-REPORT-02	Report submission completes session, deducts correct student allocations and creates exactly one tutor earned fee. Missing report keeps hold pending and no payable fee; repeated reminder until resolved. No-show expiry alone is not proof of delivery. Admin can complete/correct on tutor's behalf with all three fields, delivery check, reason, actor/time/status history and tutor notification.	S01 §4
REQ-REPORT-03	Editing completed report changes text/version only, not deductions, referrals or fees. Correct financial outcome through audited adjustments. Authorized student/tutor/admin can view report; entitlement-specific access follows Q06. Existing reports preserved; long legacy export handling Q07.	S01 §4

Requirement	Acceptance criteria	Source / decision
REQ-REPORT-04	Student Download reports includes eligible reported sessions in last three calendar months, newest first; current-format reports one session/page. Admin can export for any student. Header banner/logo, right-aligned orange STUDENT REPORT; metadata for the student, competition, mode, tutor, date, time, class type, topic, cohort, and session; three bulleted feedback rows; branded footer generation date and page number. Use requesting student's name, live data, no sample highlights or screenshot background.	S01 §4; M01; Q06/Q07
REQ-TAX-01	Tutor profile completion requires legal name/16-digit NIK, NPWP optional. Admin tax rates support two decimals: NIK+NPWP 2.50%, NIK-only 3.00%, Missing 3.00%, tutor override allowed. Tax adviser confirmation owned by Cogito. Legacy gate Q07.	S01 §4
REQ-PAYOUT-01	Admin reviews explicit eligible sessions/gross/current tax-profile status or override/rate/whole-rupiah withholding/single 2500 non-BCA transfer fee/net. Prepare and recorded values preserve tax/bank/fee identity snapshots. Later profile/settings edits never recalculate recorded payout. Earned session cannot be included in two active payout allocations.	S01 §4; Q08
REQ-PAYOUT-02	Transfer remains external. Admin records actual amount, actual payment date and optional reference/proof before paid; operator/time retained. Mistaken record void requires note, retains history and returns included sessions to unpaid while exposing any real external payment for reconciliation. Handling difference/partial payment Q08.	S01 §4
REQ-PAYOUT-03	Tutor screen/email shows gross/rate/tax/transfer fee/net/covered sessions. Monthly tax CSV sums non-void paid snapshots, not current tax profiles: legal name,NIK,NPWP,status,gross paid,all applicable rates,withholding,net,monthly withholding total; mixed rates preserve payout detail. Month based on actual payment date.	S01 §4

8. Registration and referrals

Requirement	Acceptance criteria	Source / decision
REQ-AUTH-01	Email signup has initially empty OTP + Send code on same row, 60s resend cooldown; resend invalidates old code. Email change resets verification, referral correction does not. Verify server proof before creating account; consume atomically only on successful create, allow valid retry. Invalid/expired/attempt-limited/send failure displayed inline. Network uncertainty checks outcome instead of creating another account/bonus.	S01 §5
REQ-AUTH-02	Google new user gets referral step with Apply code/No referral code, no extra OTP. Until saved, next login resumes step; once saved cannot repeat. Existing matching-email account reused without new reward/attribution. Direct APIs cannot bypass choice/proof; existing account linking must be authenticated/provider-verified. Investigate Google's unverified warning separately in provider console.	S01 §5
REQ-FRIEND-01	Valid code welcome default15, referrer reward15, semester cap75; no code no welcome. Unique codes, prevent self-referral, welcome at most once. Welcome/reward values lock at referred signup; semester cap uses setting effective at first eligible completion. Friend/KOL welcome/role/stacking Q09.	S01 §5; Q09
REQ-FRIEND-02	First completed Marks-costing private/group/cohort session/masterclass qualifies, free class not. First eligible **series session** trigger is per completion, not delayed by cohort parent. Jan1-Jun30 / Jul1-Dec31 by completion; remaining cap10 -> credit10, no daily limit, no expiry, no reversal of credited rewards. At exhausted cap behavior Q10. No-show eligibility Q06.	S01 §5; Q06/Q10
REQ-FRIEND-03	Referral screen shows own code, semester earned, remaining cap and end date; copy uses applicable settings. Concurrent completions for different referred students cannot overrun cap. Signup15 -> config20 -> first completion still15 before current cap; new signup20.	S01 §5
REQ-KOL-01	Admin campaign settings support signup validity30d, attribution90d, first successful IDR top-up, flat/percentage/both, either zero. Pause/expiry stops new signups only. Terms/attribution window lock at signup: 10%/90d -> admin15%/30d -> day45 purchase350000 still earns35000. Window anchor/rounding/base/first reversal Q11/Q12.	S01 §5; Q11/Q12

Requirement	Acceptance criteria	Source / decision
REQ-KOL-02	One qualifying first purchase creates one commission even when webhook deliveries or status updates repeat. Admin records actual amount, payment date, and reference for external transfers, with calculated, transferred, and outstanding amounts; partial transfers remain partial and excess stays visible as overpayment. No automatic recovery or offset. Monthly CSV lists attributed users, qualifying purchases, and the calculated, transferred, and outstanding amounts with enough detail for reconciliation.	S01 §5
REQ-KOL-03	Admin correction needs reason/before-after. Transfer recording never rewrites agreement. Genuine payment invalidation voids unpaid commission; paid transfer history retained with adjustment/overpayment for finance. Friend reward is not reversed. No new customer cash-refund feature.	S01 §5; Q12

9. Website, content migration and landing

Requirement	Acceptance criteria	Source / decision
REQ-CONTENT-01	One Activities page has Masterclasses, Cohorts, and Other sections. The first two read class records; admins enter content for Other, which can include legacy types such as Cogito101, SimulationDays, and Townhall without dedicated sections. Use app-style cards. Preserve schedules, descriptions, media, relationships, and old links or redirects. English is required; Indonesian is optional.	S01 §6; S02
REQ-CONTENT-02	Remove landing Activities and Start Learning; update navigation/deep links. Tutor list switches immediately to published app profiles, no legacy fallback/placeholder people; explicit empty state accepted. Public fields allowlisted; no financial identity exposure, even after new schema columns.	S01 §6
REQ-CONTENT-03	Knowledge Bank/Competition Calendar migrate last to DB/API; admin saves live, no extra editorial workflow. Manual re-entry allowed. Before cutting Sanity reads verify inventory counts, locale content, relationship/file access, redirect links and rollback. Existing Knowledge Bank eligibility/redirect preserved.	S01 §6
REQ-CALENDAR-01	Same event+date appears once in agenda; two distinct events with same title remain distinct; legitimate event appearances across multiple dates remain. Confirm source identity before dedupe.	S01 §6

Requirement	Acceptance criteria	Source / decision
REQ-FAQ-01	Admin adds/edits nonempty English question/answer, optional Indonesian, order, active, Show on landing. All active entries on full page ordered; landing active&&showOnLanding same order + full-page link. Deactivate hides both even if landing flag stays true. Paragraph/list formatting safe; no nested scrolling. Successful save goes live with implemented cache invalidation.	S01 §6; S02
REQ-LANDING-01	School logos manually navigable horizontally by mouse/keyboard/touch; selected animations/label-heading spacing refined, especially Why Cogito/Behind Every Medal. Content readable without motion. Testimonial auto advance plus manual arrows, pause on interaction/focus, reduced-motion support. Mobile behavior must be tested; current mobile static testimonials do not establish desired carousel compliance.	S01 §6
REQ-LANDING-02	App feature motion/mini-video demonstrates approved flows using approved brief/assets. References 1609sat.com/borderless.so guide selected areas only. Production ownership/count/duration/revisions pending M02; no full redesign.	S01 §§6-8; M02/Q14

10. Success criteria and acceptance ownership

This release is successful when the functionality above meets its ACs, not when an arbitrary new conversion target is invented. Operational measurements:

- Zero duplicate wallet credits/allocations/session fees/rewards/commissions in replay and concurrency suites; zero negative balance or oversold-seat outcomes in those suites. Evidence: DB/invariant assertions against real test Postgres.
- 100% default price golden-table agreement and stored financial snapshot agreement in tested cases. Evidence: deterministic unit/integration suite and admin preview UAT.
- All role/access denial scenarios pass, including raw RPC and public financial-field allowlist tests.
- Report export uses complete live values and passes current-format maximum-text page rendering; legacy policy Q07 accepted before production export.
- Migration inventory accounts for every retained/redirected/explicitly retired item; unresolved broken link/file/access cases block cutover.
- Client UAT acceptance is recorded by named owner Q14, including finance totals and outstanding material exceptions.

No latency/SLO/conversion baseline was measured in this audit; do not present invented numbers as existing promises. SPEC requires measured performance sampling before rollout and an explicit accepted limit if provider/server constraints appear.

11. Delivery and approval boundaries

Suggested dependency order: economy/payment -> tax/payout -> big classes -> reports/PDF -> registration/referrals -> website, with Knowledge Bank/Calendar last. Technical foundations for per-session fees/entitlements may need to precede finishing payout UI; TASKS captures this rather than following the list mechanically.

Target from S01 and S06: development/integration Oct19-30, testing/UAT/fixes Oct31-Nov6, and target production release W1 November (1-7 November 2026), only after readiness and client acceptance. These are planning targets, not a validated completion estimate or client-approved fixed launch commitment. At the end-of-development checkpoint, report remaining scope/materials and readiness against the W1 target; record any date change before release. Do not label all tasks ready while Q01-Q12 or Q14-Q15 remain unresolved. See TASKS for independent work and SPEC for proposed contracts.

Appendix A
Release v3 Additional Scope Quotation

Issued: 19 October 2026 | Reference: COGITO-V3-ADD-20261019-R1 | Currency: IDR

Status: final commercial baseline issued for written acceptance; not an accepted change order or invoice.

This appendix accompanies the Release v3 PRD, scope baseline dated 19 October 2026. The original contract baseline is Phase 0 PRD version 1.7, confirmed by the project owner. This quotation covers additional and changed scope only; it does not charge again for obligations under that baseline.

1. Additional development fee

Additional work package	Included change
Economy changes and exact top-up	Revised competition rate card and admin controls, package adjustments, custom Marks quotations, pricing tiers, surcharge, and recommendations and integration with the existing payment flow
Cohorts and masterclasses	Shared public class/session model, curriculum, tutor assignment, capacity and enrollment, full/half/single plans, installment reminders, late joining/rejoining and class-specific cancellation/returns
Tutor finance extension	Tax identity/settings/override, withholding, explicit session coverage, payout snapshots, actual-transfer recording, void/reconciliation and monthly tax export
Report extensions and branded PDF	New report limits/reminders/admin resolution and cross-class support, plus student/admin three-month branded PDF export, reusing the agreed session report foundation

Additional work package	Included change
Friend referrals and KOL	Registration-code integration, welcome/reward rules, semester caps, campaign attribution/commission, settlement history/corrections and exports
Website and content extensions	App-backed Activities and public tutor integration, FAQ administration/full page, scoped Calendar/Knowledge Bank source migration and targeted landing changes, with English required and Indonesian optional
Competition catalog management	Admin CRUD for parent competition types and child specializations, archive/reactivate and safe deletion/move rules, configurable parent palettes, and dynamic catalog use across affected features as defined by PRD REQ-COMP-01..07

Fixed additional development fee: Rp5,500,000. This is one bundled price for all listed work packages; no row is a separately priced unit or measured hourly estimate. Testing, documentation updates and deployment work for these additions are included. Removing a work package requires a written quotation revision because dependencies may be shared.

The fee above covers the additional work in this appendix. Original-contract payment arrangements remain separate.

2. Scope boundary

The detailed functional reference is the Release v3 PRD and its acceptance criteria, including competition catalog requirements REQ-COMP-01..07. The contract scope comparison distinguishes original obligations from additional work. Existing signup/OTP, authentication, wallet/ledger/payment integration, solo/group/short-series booking, notification/Meet foundations, tutor profiles and basic honorarium visibility are not sold again under this appendix. Defects or unfinished acceptance criteria belonging to the original contract remain original-contract work.

The report work reuses previously agreed/delivered report inputs. The finance work extends existing payout support. Website integration reuses existing website structure and class/profile data. This is not a full website redesign, a replacement payment system, or a rewrite of the existing application.

Before production release, close the decision-register items that gate shipped behavior and agree the retained content/migration inventory. Any separate existing website contract must be checked for overlap so the same deliverable is not charged twice. The Rp5,500,000 fee

covers the locked scope in this PRD. A material addition or change to an agreed workflow requires written impact and quotation agreement before that extra work starts; it does not automatically change this fee.

Not included in this fee

- Feature-video/motion production is still in research and development (R&D). The developer will explore feasibility and make reasonable efforts to develop a suitable approach. Final production scope, any additional fee and delivery schedule will be discussed and agreed in writing after R&D findings are available, before production begins. Video production is not included in the Rp5,500,000 development fee and no finished video is committed at this stage. Placement of an agreed, ready-to-use showcase asset is included in the targeted website work.
- Hosting, domains, Google Workspace, payment gateway charges, storage/email services, paid assets and other third-party subscriptions or usage charges.
- Unspecified bulk content creation/translation or manual entry beyond the agreed migration/content inventory. Cogito supplies or approves English wording; Indonesian is optional.
- New features outside the referenced scope, including automated bank payouts, customer cash refunds, parent accounts, WhatsApp notifications, waitlists, private/school cohorts and a report-template editor.

Any invoice tax treatment or withholding required by the parties must be recorded as part of written acceptance; this quotation does not assume the developer's tax status or add an unspecified tax amount to the price.

3. Payment milestones

Milestone	Amount	Trigger
First payment - 50%	Rp2,750,000	Written acceptance of this additional scope and quotation
Final payment - 50%	Rp2,750,000	Completion of agreed UAT and recorded acceptance, before production release of the additions

Original-contract payment arrangements remain separate. If a partial/phased release is agreed, record its deliverables, acceptance and payment milestones in writing before proceeding.

At issue, no client acceptance or payment is recorded. W1 November is the project owner's target, not a client-approved fixed launch; video production remains separate.

4. Target timeline and commencement conditions

This appendix is the commercial summary of the current planning target; the PRD and execution plan retain detailed dependencies and acceptance scenarios.

Phase	Current target	Exit condition
Development and integration	19-30 October 2026	Agreed additional flows available for integrated testing; progress checkpoint at the end of development
Integrated testing, UAT and fixes	31 October-6 November 2026	Relevant financial/access/booking tests pass, release blockers resolved, client acceptance recorded
Target production release	W1 November 2026 (1-7 November)	Testing and acceptance complete, final payment milestone met, release readiness confirmed

W1 November (1-7 November 2026) is the target production release window, not a fixed delivery guarantee or a validated effort estimate. Production release may occur only after testing/UAT exit conditions, client acceptance and release-readiness gates are met. If a required gate is still open by 7 November, the parties must record a revised date before production release; the target does not waive any gate.

Continuation of the quoted scope depends on written acceptance and the first payment, resolution of decisions needed for the remaining work, necessary access, and an agreed materials/content delivery schedule. Original report branding, class covers/curriculum, approved FAQ wording and any showcase inputs must arrive in time for their dependent work. Independent work may proceed while later materials are pending.

Material delivery, necessary client decisions, third-party readiness or UAT feedback can affect the target. Review and record any date change together; do not silently extend the schedule or assume a fixed day-for-day extension. At the end-of-development checkpoint, confirm remaining work and readiness against the W1 target. The video production schedule will be agreed separately after R&D; the core development target does not promise a completed video. Any change to the core release scope or dates requires explicit agreement.

5. UAT, revisions and defect correction

- This quotation includes **two consolidated UAT feedback rounds** for refinements within the agreed scope. Cogito nominates one approval owner to consolidate feedback and record acceptance against the PRD criteria.
- A defect is behavior that fails an agreed requirement or acceptance criterion. Correcting such a defect is not charged as a new feature and does not become excluded merely because two feedback rounds have occurred.
- New features, changed business rules, additional pages or expanded deliverables are change requests, with impact/price/date agreed before implementation. A material change is not treated as a cosmetic UAT revision.
- Included post-release defect correction period: **30 calendar days from production release of the additions**, covering defects against their agreed scope without an additional development fee. New requirements, ongoing content operations and third-party subscription/usage costs are separate. Original-contract obligations are not redefined by this period.

Acceptance. Written agreement to this quotation's price, scope, payment terms and timeline is required. Record the accepted revision; silence is not acceptance.
